ABSTRACT

The Sea-viewing Wide Field-of-view Sensor (SeaWiFS) is the follow-on ocean color instrument to the Coastal Zone Color Scanner (CZCS), which ceased operations in 1986, after an eight-year mission. SeaWiFS is expected to be launched in 1996, on the SeaStar satellite, being built by Orbital Sciences Corporation (OSC). The SeaWiFS Project at the National Aeronautics and Space Administration (NASA) Goddard Space Flight Center (GSFC), has undertaken the responsibility of documenting all aspects of this mission, which is critical to the ocean color and marine science communities. This documentation, entitled the *SeaWiFS Technical Report Series*, is in the form of NASA Technical Memorandum Number 104566. All reports published are volumes within the series. This particular volume serves as a reference, or guidebook, to the previous 29 volumes and consists of 5 sections including: an errata, an index to key words and phrases, a list of all references cited, and lists of acronyms and symbols used. It is the editors' intention to publish a cumulative index of this type after every five volumes in the series. Each index covers the reference topics published in all previous editions, that is, each new index will include all of the information contained in the preceding indices.

1. INTRODUCTION

This is the fifth in a series of indices, published as a separate volume in the Sea-viewing Wide Field-of-view (SeaWiFS) Technical Report Series, and includes information found in the first 29 volumes of the series. The Report Series is written under the National Aeronautics and Space Administration's (NASA) Technical Memorandum (TM) Number 104566. The volume numbers, authors, and titles of the volumes covered in this index are:

- Vol. 1: S.B. Hooker, W.E. Esaias, G.C. Feldman, W.W. Gregg, and C.R. McClain, *An Overview of SeaWiFS and Ocean Color*.
- Vol. 2: W.W. Gregg, *Analysis of Orbit Selection for SeaWiFS: Ascending vs. Descending Node*.
- Vol. 3: C.R. McClain, W.E. Esaias, W. Barnes, B. Guenther, D. Endres, S.B. Hooker, B.G. Mitchell, and R. Barnes, *SeaWiFS Calibration and Validation Plan*.
- Vol. 4: C.R. McClain, E. Yeh, and G. Fu, *An Analysis of GAC Sampling Algorithms: A Case Study*.
- Vol. 5: J.L. Mueller and R.W. Austin, *Ocean Optics Protocols for SeaWiFS Validation*.
- Vol. 6: E.R. Firestone and S.B. Hooker, *SeaWiFS Technical Report Series Cumulative Index: Volumes 1-5*.
- Vol. 7: M. Darzi, *Cloud Screening for Polar Orbiting Visible and IR Satellite Sensors*.
- Vol. 8: S.B. Hooker, W.E. Esaias, and L.A. Rexrode, *Proceedings of the First SeaWiFS Science Team Meeting*.
- Vol. 9: W.W. Gregg, F. Chen, A. Mezaache, J. Chen, and J. Whiting, *The Simulated SeaWiFS Data Set*.

- Vol. 10: R.H. Woodward, R.A. Barnes, W.E. Esaias, W.L. Barnes, A.T. Mecherikunnel, *Modeling of the SeaWiFS Solar and Lunar Observations*.
- Vol. 11: F.S. Patt, C.M. Hoisington, W.W. Gregg, and P.L. Coronado, *Analysis of Selected Orbit Propagation Models*.
- Vol. 12: E.R. Firestone and S.B. Hooker, *SeaWiFS Technical Report Series Cumulative Index: Volumes 1-11*.
- Vol. 13: C.R. McClain, J.C. Comiso, R.S. Fraser, J.K. Firestone, B.D. Schieber, E-n. Yeh, K.R. Arrigo, and C.W. Sullivan, *Case Studies for SeaWiFS Calibration and Validation, Part 1*.
- Vol. 14: J.L. Mueller, *The First SeaWiFS Intercalibration Round-Robin Experiment, SIRREX-1, July 1992*.
- Vol. 15: W.W. Gregg, F.S. Patt, and R.H. Woodward, *The Simulated SeaWiFS Data Set, Version 2*.
- Vol. 16: Mueller, J.L., B.C. Johnson, C.L. Cromer, J.W. Cooper, J.T. McLean, S.B. Hooker, and T.L. Westphal, *The Second SeaWiFS Intercalibration Round-Robin Experiment, SIRREX-2, June 1993*.
- Vol. 17: Abbott, M.R., O.B. Brown, H.R. Gordon, K.L. Carder, R.E. Evans, F.E. Muller-Karger, and W.E. Esaias, *Ocean Color in the 21st Century: A Strategy for a 20-Year Time Series*.
- Vol. 18: Firestone, E.R., and S.B. Hooker, *SeaWiFS Technical Report Series Summary Index: Volumes 1-17*.
- Vol. 19: McClain, C.R., R.S. Fraser, J.T. McLean, M. Darzi, J.K. Firestone, F.S. Patt, B.D. Schieber, R.H. Woodward, E-n. Yeh, S. Mattoo,

- S.F. Biggar, P.N. Slater, K.J. Thome, A.W. Holmes, R.A. Barnes, and K.J. Voss, *Case Studies for SeaWiFS Calibration and Validation, Part 2*.
- Vol. 20: Hooker, S.B., C.R. McClain, J.K. Firestone, T.L. Westphal, E-n. Yeh, and Y. Ge, *The SeaWiFS Bio-Optical Archive and Storage System (SeaBASS), Part 1*.
- Vol. 21: Acker, J.G., *The Heritage of SeaWiFS: A Retrospective on the CZCS NIMBUS Experiment Team (NET) Program*.
- Vol. 22: Barnes, R.A., W.L. Barnes, W.E. Esaias, and C.R. McClain, *Prelaunch Acceptance Report for the SeaWiFS Radiometer*.
- Vol. 23: Barnes, R.A., A.W. Holmes, W.L. Barnes, W.E. Esaias, C.R. McClain, and T. Svitek, *SeaWiFS Prelaunch Radiometric Calibration and Spectral Characterization*.
- Vol. 24: Firestone, E.R., and S.B. Hooker, *SeaWiFS Technical Report Series Summary Index: Volumes 1–23*.
- Vol. 25: Mueller, J.L., and R.W. Austin, *Ocean Optics Protocols for SeaWiFS Validation, Revision 1*.
- Vol. 26: Siegel, D.A., M.C. O'Brien, J.C. Sorenson, D.A. Konnoff, E.A. Brody, J.L. Mueller, C.O. Davis, W.J. Rhea, and S.B. Hooker, *Results of the SeaWiFS Data Analysis Round-Robin (DARR-94), July 1994*.
- Vol. 27: J.L. Mueller, R.S. Fraser, S.F. Biggar, K.J. Thome, P.N. Slater, A.W. Holmes, R.A. Barnes, C.T. Weir, D.A. Siegel, D.W. Menzies, A.F. Michaels, and G. Podesta, *Case Studies for SeaWiFS Calibration and Validation, Part 3*.
- Vol. 28: McClain, C.R., K.R. Arrigo, W.E. Esaias, M. Darzi, F.S. Patt, R.H. Evans, J.W. Brown, C.W. Brown, R.A. Barnes, and L. Kumar, *SeaWiFS Algorithms, Part 1*.
- Vol. 29: Aiken, J., G.F. Moore, C.C. Trees, S.B. Hooker, and D.K. Clark, *The SeaWiFS CZCS-Type Pigment Algorithm*.

This volume within the series serves as a reference, or guidebook, to the aforementioned volumes. It consists of the four main sections included with the first two indices published, Volumes 6 and 12, in the series: a cumulative index to key words and phrases, a glossary of acronyms, a list of symbols used, and a bibliography of all references cited in the series. In addition, as in Volumes 12, 18, and 24, an errata section has been added to address issues and needed corrections that have come to the editors' attention since the volumes were first published.

The nomenclature of the index is a familiar one, in the sense that it is a sequence of alphabetical entries, but it utilizes a unique format since multiple volumes are involved. Unless indicated otherwise, the index entries refer to some aspect of the SeaWiFS instrument or project, for example, the mission overview index entry refers to an overview of the SeaWiFS mission. An index entry is composed of a keyword or phrase followed by an entry field that directs the reader to the possible locations where a discussion of the keyword can be found. The entry field is normally made up of a volume identifier shown in bold face, followed by a page identifier, which is always enclosed in parentheses:

keyword, **volume**(pages).

If an entry is the subject of an entire volume, the volume field is shown in slanted type without a page field:

keyword, Vol. #.

An entry can also be the subject of a complete chapter, as is the case in Volumes 13 and 19, to name a few. In this instance, both the volume number and chapter number appear without a page field:

keyword, **volume**(ch. #).

Figures or tables that provide particularly important summary information are also indicated as separate entries in the page field. In this case, the figure or table number is given with the page number on which it appears.

2. ERRATA

- In the Table of Contents in Volume 19, Chapter 7's title was incorrectly printed as "The Generation of CZCS Near-Real Time Ancillary Data Files." The correct title is "The Generation of SeaWiFS Near-Real Time Ancillary Data Files."
- In Volume 29, all the ratios in Fig. 5 were transposed—that is, the *y* axis for panel a should be C_{aa}/C_{TP} , for panel b C_{PS}/C_{TP} , and so on for all the graph figures. The legend for the figure has the same error. The first sentence of the legend should read (with the panel equations listed here for ease of reading): "Global total pigment ratios for a variety of biogeochemical provinces:
 - C_{aa}/C_{TP} ,
 - C_{PS}/C_{TP} ,
 - $(C_{PS} + C_{PP})/C_{TP}$,
 - C_c/C_{TP} ,
 - C_b/C_{TP} ,
 - C_{PP}/C_{TP} ,
 - $C_{abc}/(C_{PS} + C_{PP})$,
 - $C_{aa}/(C_{PS} + C_{PP})$, and
 - $(C_{PS} + C_{PP})/C_{PP}$.
- In Volume 29, page 29, first sentence under (29) should read: "The correction is applied to the chlorophyll and pigment, determined using (23) and (24), where the pigment concentration is less than 2 mg m^{-3} , i.e., when $L_{WN}(443)$ is valid."

4. Note: Since the issuance of previous volumes, a number of the references cited have changed their publication status, i.e., they have gone from "submitted" or "in press" to printed matter. In other instances, some part (or parts) of the citation, e.g., the title or year of publication, has changed or was printed incorrectly. Listed below are the references in question as they were cited in one or more of the first 29 volumes in the series, along with how they now appear in the references section of this volume.

SYMBOLS

- A -

- a The semi-major axis of the Earth's orbit, a formulation constant, a constant equal to 0.983, a constant equal to $-20/\tanh(2)$; an exponential value in the expression relating the radiance of scattered light to wavelength; or a regression coefficient (depending on usage).
- a' The absorption at the Raman excitation wavelength.
- $a(\lambda)$ Total absorption coefficient.
- $a(z, \lambda)$ Spectral absorption coefficient.
- a_a The specific absorption of chlorophyll a .
- a_{abc} The specific absorption of chlorophylls a , b , and c .
- a_b The specific absorption of chlorophyll b .
- a_c The specific absorption of chlorophyll c .
- $a_e(\lambda)$ Absorption coefficient due to substances other than water.
- $a_f(z, \lambda)$ $a_p(\lambda) - a_t(z, \lambda)$.
- a_g The DOM/detritus specific absorbance.
- $a_g(\lambda)$ Gelbstoff spectral absorption coefficient.
- $a_i(\lambda_a, T)$ Initial estimate of the apparent absorption coefficient; used for determining the apparent absorption coefficient for substances other than water.
- a_o Oxygen absorption coefficient.
- a_{ox} Coefficient for oxygen absorption.
- a_{oz} Coefficient for ozone absorption.
- $a_p(\lambda)$ Particulate spectral absorption coefficient.
- a_{PP} The specific absorption of PPC.
- $a_{ps}(\lambda)$ Photosynthetically active pigment spectral absorption coefficient.
- a_{PS} The specific absorption of PSC.
- $a_t(\lambda)$ Tripton spectral absorption coefficient.
- $a_w(\lambda)$ Absorption coefficient for pure water.
- a_{vv} Coefficient for water vapor absorption.
- a_ϕ The DOM/chlorophyll combined absorbance.
- $a_\phi(\lambda)$ Phytoplankton pigment spectral absorption coefficient.
- $a_\phi^M(\lambda)$ Phytoplankton pigment spectral absorption coefficient determined in methanol extract.
- A Fitting coefficient for $P_4 - X$, or clearance area of a filter, depending on usage.
- A_0 Coefficient for the linear term in the scan modulation correction equation.
- A_d The detector aperture.
- $A_d(\bar{z}, \lambda)$ Linear regression intercepts at the center of a fitted depth interval for \ln of $A_d(z, \lambda)$ (defined in Vol. 26).
- A_f The foam reflectance.
- A_i The intersection area or an arbitrary constant (depending on usage).
- A'_i An arbitrary constant.
- A_j An arbitrary constant.
- A'_j An arbitrary constant.
- $A_l(\bar{z}, \lambda)$ Linear regression intercepts at the center of a fitted depth interval for \ln of $A_l(z, \lambda)$ (defined in Vol. 26).
- $A_u(\bar{z}, \lambda)$ Linear regression intercepts at the center of a fitted depth interval for \ln of $A_u(z, \lambda)$ (defined in Vol. 26).
- $A(k)$ Absorptivity.
- $A(\lambda)$ Coefficient for calculating $b_b(\lambda)$.
- $A(\lambda_a)$ AC-9 instrument calibration factor for absorption.
- $A(\lambda_c)$ AC-9 instrument calibration factor for beam attenuation.

- B -

- b A formulation coefficient, a constant equal to $1/3$, or a regression coefficient (depending on usage).
- $b(z, \lambda)$ Total scattering coefficient.
- $b(\theta, z, \lambda_0)$ Volume scattering coefficient.
- b_b Backscattering coefficient.
- $b_b(z, \lambda)$ Spectral backscattering coefficient.
- $b_{bc}(\lambda)$ Spectral backscattering coefficient for phytoplankton.
- b_{bp} The particle specific backscatter coefficient (usually normalized to chlorophyll a concentration).
- b_{bw} The backscatter coefficient of water.
- $b_i(\lambda)$ Initial estimate of the particle scattering coefficient; used for determining the apparent particle scattering coefficient for substances other than water.
- b_{min} Scattering associated with phytoplankton (Prieur and Sathyendranath 1981).
- $b_p(\lambda)$ Total particle scattering.
- $b_r(\lambda)$ Total Raman scattering coefficient.
- b_R The Raman scattering coefficient.
- $b_w(\lambda)$ Total scattering coefficient for pure seawater.
- $b1(k)$ Input data for polarization calculations for SeaWiFS band 1.
- $b7(k)$ Input data for polarization calculations for SeaWiFS band 7.
- B Excess target radiance, the fitting coefficient for e^{B/P_5} , the width of band 7, a variable in the expression for limiting reflectance (R_{lim}), defined as $0.33b/K_d$, or an empirical constant (depending on usage).
- B_0 Coefficient for the power term in the scan modulation correction equation.
- B_1 BBOP casts 1 m from the ship's stern.
- B_6 BBOP casts 6 m from the ship's stern.
- $B(\lambda)$ Coefficient for calculating $b_b(\lambda)$.
- B_b An empirical constant dependent on the backscatter ratio.

- C -

- $c(z, \lambda)$ Spectral beam attenuation coefficient.
- $c(z, 660)$ Red beam attenuation (at 660 nm).
- $c_e(\lambda)$ Corrected non-water beam attenuation coefficient.
- $c_i(\lambda)$ Initial estimate of the beam attenuation coefficient (used for determining the apparent beam attenuation coefficient for substances other than water).
- $c_p(\lambda)$ Beam attenuation coefficient due to particles.
- $c_w(\lambda)$ Beam attenuation coefficient for pure water equal to $a_w(\lambda) + b_w(\lambda)$.
- $[chl. a]/K$ Concentration of chlorophyll a over K , the diffuse attenuation coefficient.
- C Chlorophyll a pigment, or just pigment concentration.
- $C'(\lambda)$ AC-9 factory calibration coefficient.
- $C'_r(\lambda)$ Additional AC-9 factory calibration coefficient.
- C_1 Measured value for the flight diffuser on a given scan line in counts or a polynomial regression factor (depending on usage).
- C_{13} Pigment concentration derived using CZCS bands 1 and 3.
- C_2 Measured value of the flight diffuser for the scan line immediately sequential to the first scan line used to measure the flight diffuser (i.e., S_1 in counts).

C_{23}	Pigment concentration derived using CZCS bands 2 and 3.	$E_s(\lambda)$	Surface irradiance.
C_a	The concentration of chlorophyll <i>a</i> .	$E_s(z, \lambda)$	Vertical profile of surface irradiance.
C_{abc}	The concentration of chlorophylls <i>a</i> , <i>b</i> , and <i>c</i> .	$E_{s,i}(\lambda)$	The value of $E_s(z, \lambda)$ at node depth z_i .
C_b	The concentration of chlorophyll <i>b</i> .	$\vec{E}_s(z_m, \lambda)$	Defined as $H\vec{E}_s(\lambda)$.
C_c	The concentration of chlorophyll <i>c</i> .	$\vec{E}_s(\lambda)$	The measured irradiance vector of length M .
C_{dark}	Instrument dark restore value, in counts.	E_{rem}	Percentage of energy removed from a wavelength band.
C_{ext}	Average total extinction cross-section of a particle.	$E_{sky}(\lambda)$	Spectral sky irradiance distribution.
C_F	The calibration factor.	$E_{sun}(z, \lambda)$	Spectral sun irradiance distribution.
C_{out}	Instrument output, in counts.	$E_u(z, \lambda)$	Upwelling spectral irradiance profile.
C_P	Phaeopigment concentration.	$E_u(0^-, \lambda)$	Upwelling spectral irradiance just beneath the sea surface.
C_{PP}	PPC concentration.	$E_w(z, \lambda)$	Irradiance in water.
C_{PS}	PSC concentration.		
$C_r(\lambda)$	Digital response of reference detector.		
C_{ref}	Reference chlorophyll value (0.5).		
C_S	Simulated C .		
$C_t(\lambda)$	Digital response of water transmission detector.		
C_{temp}	Temperature sensor output, in counts, represented by an 8-bit digital word in the SeaStar telemetry.		
C_{TP}	Total pigment concentration.		
$[C + P]$	Pigment concentration defined as mg chlorophyll <i>a</i> plus phaeopigments m^{-3} .		
— D —			
d	The distance between source and detector apertures.		
d_i	Distance from the i th observation point to the point of interest.		
d_j	Distance from the j th observation point to the point of interest.		
$d(I(\lambda))$	An increment in detector current.		
$d\lambda$	An increment in wavelength.		
ds	Detector configuration datum.		
D	Sequential day of the year.		
\bar{D}	Orbit position difference vector.		
D_{at}	Along-track position difference.		
D_{ct}	Cross-track position difference.		
D_{rad}	Radial position difference.		
DC	Digital count (value) or direct current (depending on usage).		
DC_{10}	Digital counts at 10-bit digitization.		
DC_{meas}	The digital counts measured unshadowed.		
DC_{scat}	The digital counts due to scattered sunlight.		
DC_{TOA}	The digital counts measured at the top of the atmosphere.		
— E —			
e	Orbit eccentricity of the Earth.		
E_0	The downwelling irradiance at the Raman excitation wavelength.		
$E(\lambda)$	Spectral irradiance.		
$\hat{E}(z, m)$	A smoothed estimate of irradiance obtained by a least-squares regression fit in the center of a depth interval.		
$E_a(\lambda)$	Irradiance in air.		
E_{beg}	Beginning irradiance value.		
E_{cal}	Calibration source irradiance.		
E_d	Incident downwelling irradiance.		
$E_d(0^-, \lambda)$	Incident spectral irradiance.		
$E_d(z, \lambda)$	Downwelling spectral irradiance profile.		
$E'_d(z, \lambda)$	Normalized downwelled spectral irradiance.		
E_{end}	Ending irradiance value.		
$E_{meas}(\lambda)$	Measured radiance.		
$E_{ref}(\lambda)$	Reference radiance.		
— F —			
f	The fraction of the surface covered by foam or the ratio of sensor-to-instrument diameters (depending on usage).		
f_i	Filter number, $i=0-11$.		
$f(T)$	Offset voltage correction from the linear function characterizing temperature response.		
$f(\lambda)$	Instrument spectral response function.		
$f\text{-ratio}$	The ratio of new to total production.		
\bar{F}	Arithmetic average.		
$\bar{F}(\lambda)$	A mean conversion factor.		
$F(\lambda)$	Calibration factor.		
$F(\lambda)$	A conversion factor to convert PR714 readings to the GSFC sphere radiance scale.		
$\bar{F}(\lambda)$	Average of calibration factors.		
F_0	Extraterrestrial irradiance corrected for Earth-sun distance.		
F_0	The scalar value of the solar spectral irradiance at the top of the atmosphere, multiplied by a columnar matrix of the four Stokes parameters (1/2, 1/2, 0, 0).		
\bar{F}_0	Mean solar irradiance.		
F'_0	Extraterrestrial irradiance corrected for the atmosphere.		
$F_0(\lambda)$	Mean extraterrestrial spectral irradiance.		
$\bar{F}_0(\lambda)$	Mean extraterrestrial irradiance.		
F_1	Pigment biomass loading factor.		
F_2	Detritus concentration loading factor.		
F_3	Carotenoid concentration (or relative pigment abundance) loading factor.		
F_a	Forward scattering probability of the aerosol.		
F_d	The total flux incident on the surface if it did not reflect light.		
F'_d	The total flux incident on the surface, corrected for surface reflection.		
\bar{F}'_d	The scalar value of the total flux incident on the surface, corrected for surface reflection, multiplied by a columnar matrix of the four Stokes parameters.		
F_i	A correction factor or an immersion coefficient (depending on usage).		
$F_v(\lambda)$	Field-of-view coefficient.		
— G —			
g	A constant that consists of the ratios of the air-sea interface effects, the effects of the light field, and the relative spectral variation of Q .		
$g(T)$	Coefficient of a linear function characterizing temperature response.		

g_1	A constant equal to 0.82.	k_1	Beginning wavenumber or a band ratio vector (depending on usage).
g_2	A constant equal to -0.55.	k_2	Ending wavenumber or a band ratio vector (depending on usage).
g_{ij}	Integrals of γ_{ij} (defined in Vol. 24).	k_c	Wavelength independent fraction.
g_s	Gain selection datum.	$k_c(\lambda)$	Spectral fit coefficient weighted over the SeaWiFS bands; $k'_c(\lambda)$ also used.
G	Gain factor or the concentration of DOM and DOM-like absorbers (depending on usage).	\vec{K}	Vector of \bar{K}_n .
$G(z, \lambda)$	Solid angle dependence with water depth.	$K(\lambda)$	Generic irradiance attenuation coefficient.
$G(\mu_0, \lambda)$	The effect of the downwelling light field.	$K(z, \lambda)$	Diffuse attenuation coefficient.
G_1	Gain setting 1.	$K(440)$	Diffuse attenuation coefficient at 440 nm.
G_2	Gain setting 2.	$K(490)$	Diffuse attenuation coefficient of seawater measured at 490 nm.
G_3	Gain setting 3.	$K_0(\lambda)$	Diffuse attenuation coefficient at $z = 0$.
G_4	Gain setting 4.	K_1	Primary instrument sensitivity factor.
$G(\lambda)$	$\hat{R}_a(\lambda_i)/\hat{R}_a(670) = (670/\lambda)^{\gamma} T_{2r}(670)/T_{2r}(\lambda_i)$.	K_2	Gain factor.
G_e	Gravitational constant of the Earth (398,600.5 km ³ s ⁻²).	K_3	Temperature dependence of detector output.
G_n	Gain factor at gain setting n .	K_4	Scan modulation correction factor.
- H -			
$h(k)$	Residual values without the calculated sinusoidal response.	K_5	Spacecraft analog to digital conversion factor.
$h(\lambda)$	Normalized response function.	K_6	Analog-to-digital offset in spacecraft conversion.
h_{ij}	Analytic integral coefficients over the Hermitian polynomials γ_{ij} .	K_7	Current from the diode at 20°C.
h_{mj}	Matrix elements (defined in Vol. 26).	$K_c(\lambda)$	Attenuation coefficients for phytoplankton.
$H(\lambda_i:\lambda_j)$	Pigment calculated from the hyperbolic transform of L_{ij} .	K_d	Diffuse attenuation coefficient for downwelling irradiance.
H	Matrix of coefficients h_{ij} or $[h_{mj}]$ (depending on usage).	$K_d(z, \lambda)$	Vertical profile of the diffuse attenuation coefficient for the downwelling irradiance spectrum.
H_{GMT}	GMT in hours.	$K'_d(z, \lambda)$	$K_d(z, \lambda)$ determined by least squares regression over a depth interval.
H_M	The measured moon irradiance.	$K_E(\lambda)$	Attenuation coefficient for downwelled irradiance.
H_s	Altitude of the spacecraft (for SeaStar 705 km).	$K_g(\lambda)$	Attenuation coefficient for Gelbstoff.
- I -			
i	Inclination angle or interval index (depending on usage).	$K_L(z, \lambda)$	Vertical profile of the diffuse attenuation coefficient for the upwelling radiance spectrum.
i'	Inclination angle minus 90°	$K'_L(z, \lambda)$	$K_L(z, \lambda)$ determined by least squares regression over a depth interval.
I	Rayleigh intensity.	\bar{K}_n	K at node depth z_n determined, with its vertical derivative by least-squares fit to radiometric profiles.
I_0	Surface downwelling irradiance.	$K_s(z, \lambda')$	Apparent attenuation coefficient measured in a homogenous water column.
I_1	Radiant intensity after traversing through an absorbing medium.	$K_u(z, \lambda)$	Vertical attenuation coefficient for upwelled irradiance.
I_2	Reflected radiant energy received by the satellite sensor.	$K_u(z, \lambda')$	Vertical profile of the diffuse attenuation coefficient for the upwelling irradiance spectrum.
I_{max}	Recorded maximum instrument output in response to linearly polarized light.	$K'_u(z, \lambda)$	$K_u(z, \lambda)$ determined by least squares regression over a depth interval.
I_{min}	Recorded minimum instrument output in response to linearly polarized light.	$K_w(\lambda)$	Attenuation coefficient for pure seawater.
$I(\lambda)$	Detector current.	- L -	
ICS	Current from the current source diode.	l	Cuvette pathlength.
- J -		l_s	Nominal absorption pathlength.
j	Interval index.	L	Radiance of light transmitted through absorbing oxygen.
$J2$	The $J2$ gravity field term (0.0010863).	$L_{i:j}$	The ratio of normalized water-leaving radiances at wavelengths i (λ_i) to j (λ_j): $L_{WN}(\lambda_i)/L_{WN}(\lambda_j)$.
$J3$	The $J3$ gravity field term (-0.0000254).	$L(\lambda)$	Spectral radiance.
$J4$	The $J4$ gravity field term (-0.0000161).	$L(\lambda_m)$	The radiance of a calibration sphere at the nominal peak wavelength of a filter.
$J5$	The $J5$ gravity field term.	$L(z, \theta, \phi)$	Submerged upwelled radiance distribution.
- K -		$L^*(\lambda, \theta, \phi)$	Atmospheric path radiance at flight altitude.
k	Wavenumber of light ($1/\lambda$), the fractional factor of total particle scattering, the molecular absorption cross-section area, or an index to two vectors of band ratios k_1 and k_2 (depending on usage).	L_0	The radiance of the atmosphere.
k'	$y/\tan \theta_{0w}$.	$L_1(\lambda)$	Apparent radiance response to a linearly polarized source.

$L_2(\lambda)$	Orthogonal apparent radiance response to a linearly polarized source.	– M –
L_a	Aerosol radiance.	m Index of refraction or an air mass (depending on usage).
L_{atm}	Radiance of light reflected from the atmosphere.	M Path length through the atmosphere or the total number of discrete data points in a vertical radiometric profile (depending on usage).
$L_c(\lambda)$	Cloud radiance threshold.	M'_m The corrected mean orbit anomaly of the Earth, which is a function of date, and refers to an imaginary moon in a circular orbit.
L_{cal}	Calibration source radiance.	M_{o2} Path length for ozone transmittance.
L_{cloud}	Maximum radiance from reflected light off of clouds.	
\mathbb{L}_d	A matrix of the four Stokes parameters for radiance incident on the surface.	
$L_g(\lambda)$	Sun glint radiance.	
L_i	Incident light or the length of the i th element (depending on usage).	– N –
$L_i(\lambda)$	Spectral radiance for run number i , or radiance, where i may represent any of the following: m for measured; LU for look-up table; 0 for light scattered by the atmosphere; sfc for reflection from the sea surface; and w for water-leaving radiance.	n The index of refraction, the mean orbital motion in revolutions per day, the gain setting, or the starting index in a measurement for angular measurements, or node index for the integral K analysis (depending on usage).
L_{LU}	The radiance calculated for the look-up tables.	$n(\lambda)$ An exponent conceptually similar to the Ångström exponent.
L_m	The radiance of the ocean-atmosphere system measured at a satellite.	$n_g(\lambda)$ Index of refraction of Plexiglas™.
L_M	The radiance of the moon.	$n_w(\lambda)$ Index of refraction of water.
L_{max}	Maximum saturation radiance.	N The total number of something, or the ending index in a measurement sequence for angular measurements, or the total number density (usage dependent).
L_{nadir}	Measured radiance at nadir.	N_D The compensation factor for a 4 log neutral density filter.
$L_{\text{NER}}(\lambda)$	Noise equivalent radiance.	N_i Total number density of either the first or second aerosol model when $i = 1$ or 2 , respectively.
$L_r(\lambda)$	Rayleigh radiance.	
$L_{r0}(\lambda)$	Rayleigh radiance at standard atmospheric pressure, P_0 .	
$L_s(\lambda)$	Subsurface water radiance.	– O –
L_{sa}	$L_0 + L_{sfc}$.	$\vec{O} \cdot \vec{P} \times \vec{V}$.
$L_{\text{sat}}(\lambda)$	Saturation radiance for the sensor.	O_{20} OFFI casts 20 m from the ship's stern.
L_{scan}	Measured radiance at any pixel in a scan.	$OD_b(\lambda)$ Baseline optical density spectrum.
L_{sfc}	The radiance of the light reflected from the sea surface.	$OD_g(\lambda)$ Optical density of soluble material (Gelbstoff).
\mathbb{L}_{sfc}	The columnar matrix of the four Stokes parameters ($L_{u,1}, L_{u,2}, L_{u,3}, L_{u,4}$).	$OD_p(\lambda)$ Optical density spectra of filtered particles.
$L_{\text{sky}}(\lambda)$	Spectral sky radiance distribution.	$OD_r(\lambda)$ Optical density reference for filter or distilled water.
$L_t(\lambda)$	Total radiance at the top of the atmosphere (where a satellite sensor is located).	$OD_t(\lambda)$ Optical density of non-pigmented particulates (trip-ton).
L_{typical}	Expected radiance from the ocean measured on orbit.	
$L_u(z, \lambda)$	Upwelling spectral radiance profile.	– P –
$L_u(0^-, \lambda)$	Upwelling spectral radiance just beneath the sea surface.	p Surface pressure.
$\hat{L}_u(\lambda)$	True upwelled spectral radiance.	p_a A factor to account for the probability of scattering to the spacecraft for three different paths from the sun.
$\tilde{L}_u(\lambda)$	Measured upwelled spectral radiance.	$p_a/(4\pi)$ Aerosol albedo of the scattering phase function.
\mathbb{L}_{up}	The columnar matrix of light leaving the surface containing the values $L_{\text{up},1}, L_{\text{up},2}, L_{\text{up},3}$, and $L_{\text{up},4}$.	p_{dev} Pressure deviation between the minimum and maximum surface pressures compared to 1,013 mb.
$L_{\text{up},i}$	The RADTRAN radiance parameters (for $i = 1, 4$).	p_{ref} Reference pressure.
L_w	The water-leaving radiance of light scattered from beneath the surface and penetrating it.	p_w The probability of seeing sun glitter in the direction θ, Φ given the sun in position θ_0, Φ_0 as a function of wind speed (W).
$L_w(443)$	Water-leaving radiance at 443 nm.	P Nodal period, phaeopigment concentration, local surface pressure, or the particulate concentration including detrital material (depending on usage).
$L_w(520)$	Water-leaving radiance at 520 nm.	\vec{P} Orbit position vector.
$L_w(550)$	Water-leaving radiance at 550 nm.	$P(\theta^+)$ Phase function for forward scattering.
$L_w(670)$	Water-leaving radiance at 670 nm.	$P(\theta^-)$ Phase function for backward scattering.
\mathbb{L}_w	The scalar value of the water-leaving radiance multiplied by a columnar matrix of the four Stokes parameters.	$P(\lambda)$ Polarization sensitivity.
$L_{WN}(\lambda)$	Normalized water-leaving radiance.	P_0 Standard atmospheric pressure (1,013.25 mb).
L'_{WN}	Normalized water-leaving radiance at the Raman excitation wavelength.	P_a Probability of scattering to the spacecraft.
LS_1	Measured radiance for mirror side 1.	
LS_2	Measured radiance for mirror side 2.	

P_i	PR714 raw radiance or the fitting coefficient for $i = 1\text{--}5$.
P_S	Simulated $C_a + C_P$ (q.v.).
P_W	Probability of seeing sun glint in the spacecraft direction.
P_σ	Phaeopigment concentration.
PF	Polarization factor.
P_{xl}	Pixel number, i.e., the numerical designation of a pixel in a scan line.

- Q -

q	Water transmittance factor.
Q	The ratio of upwelling irradiance to radiance, which varies with the angular distribution of the upwelling light field, and is π for an isotropic distribution.
$Q(\lambda)$	$L_u(0^-, \lambda)$ to $E_u(0^-, \lambda)$ relation factor (equal to π for a Lambertian surface).

- R -

r	Water-air reflectance for totally diffuse irradiance, the radius coordinate, or the Earth-sun distance (depending on usage).
r_1	The radius of circle one or source aperture (depending on usage).
r_2	The radius of circle two or detector aperture (depending on usage).
r_i	The geometric mean radii of either the first or second aerosol model when $i = 1$ or 2, respectively.
R	Reflectance.
$R(\lambda)$	The irradiance reflectance at a particular wavelength.
\mathbb{R}	The reflection matrix.
\overline{R}	Mean Earth-sun distance.
R^2	The square of the linear correlation coefficient.
$R(0^-, \lambda)$	Irradiance reflectance just below the sea surface.
R_1	A multiplier for mirror side 1.
R_2	A multiplier for mirror side 2.
R_a	Aerosol reflectance.
\dot{R}_a	$R_a/(qT_{2r})$.
R_e	Mean Earth radius (6,378.137 km).
R_E	Effective resistance for the thermistor-resistor pair.
$R_L(z, \lambda)$	Spectral reflectance.
R_{lim}	Limiting reflectance for defining Case-1 water.
R'_L	Reflectance from an uncalibrated radiometer.
R_r	Rayleigh reflectance.
R_{rs}	Remote sensing reflectance.
$R_{rs}(z, \lambda)$	Spectral remote sensing reflectance profile.
$R_{rs}(z, \lambda)$	Vertical profile of the remote sensing reflectance spectrum.
R_s	Subsurface reflectance.
R_t	Total reflectance at the sensor.
\dot{R}_t	$(R_t - R_r)/(qT_{2r})$.
R_T	Resistance of the thermistor.
R_z	Sunspot number.

- S -

s	The reflectance of the atmosphere for isotropic radiance incident at its base.
$s(\lambda)$	The slope for the range 0–1,023.
S	The solar constant or the slope of a line (depending on usage).
$S(\lambda)$	Solar spectral irradiance or $L_a(\lambda)/L_a(670)$ (depending on usage).

$S(\lambda_r)$	A coefficient of water temperature variation in $a_w(\lambda, T)$.
$S_G(\lambda)$	Radiometer signal (uncalibrated) measured viewing a reflectance plaque.
S_i	Initial detector signal.
S_n	Detector signal with gain.
S_{sky}	Radiometer signal (uncalibrated) measured viewing the sky.
$S_w(\lambda)$	Radiometer signal (uncalibrated) measured viewing the water.
s_{xy}	Residual standard deviation.

- T -

t	Time variable or the transmission of L_{sfc} through the atmosphere (depending on usage).
t'	The transmission of L_w through the atmosphere.
$t(k)$	Spectral transmission as a function of wavenumber.
$t(\lambda)$	Diffuse transmittance of the atmosphere.
$t(750, \theta)$	Diffuse transmittance between the ocean surface and the sensor at 750 nm.
t_0	The sum of the direct and diffuse transmission of sunlight through the atmosphere, or initial time (usage dependent).
t_1	First observation time.
t_2	Second observation time.
t_a	Aerosol transmittance after absorption.
t_{as}	Aerosol transmittance after scattering.
t_d	Direct component of transmittance after absorption by the gaseous components of the atmosphere, scattering and absorption by aerosols, and scattering by Rayleigh.
$t_d(z, \lambda)$	Downward spectral irradiance transmittance from flight altitude z to the surface.
t_e	Time difference in hours between present position and most recent equator crossing.
t_{EC}	Equator crossing time.
t_{oz}	Transmittance after absorption by ozone.
t_r	Transmittance after Rayleigh scattering.
t_s	Diffuse component of transmittance after absorption by the gaseous components of the atmosphere, scattering and absorption by aerosols, and scattering by Rayleigh.
t_{wv}	Transmittance after absorption by water vapor.
T	Tilt position.
T'	Instrument temperature during calibration.
$T(\lambda)$	The transmittance along the slant path to the sun.
$T(\lambda, \theta)$	Total transmittance (direct plus diffuse) from the ocean through the atmosphere to the spacecraft along the path determined by the spacecraft zenith angle θ .
$T(\lambda, \theta, \theta_0)$	Two-way transmission through oxygen in the model layer in terms of zenith angle (θ), and solar angle (θ_0).
T_{2r}	Two-way diffuse transmittance for Rayleigh attenuation.
$T_0(\lambda, \theta_0)$	Total downward transmittance of irradiance.
T_e	Equation of time.
$T_g(\lambda)$	Transmittance through a glass window.
T_{ox}	Transmittance of oxygen (O_2).
T_{oz}	Transmittance of ozone (O_3).
$T_s(\lambda)$	Transmittance through the surface.
$T_w(\lambda)$	Transmittance through a water path.
T_{wv}	Transmittance of water vapor (H_2O).

– U, V –

- V Volume of water filtered.
- $V(z)$ Transmissometer voltage.
- $V(\theta)$ Normalized measured value for a cosine collector.
- \vec{V} Orbit velocity vector.
- \hat{V} True voltage.
- \tilde{V} Measured voltage.
- $\bar{V}(\theta_i)$ Mean normalized measured value of instrument response.
- V_{air} Factory transmissometer air calibration voltage.
- V'_{air} Current transmissometer air calibration voltage.
- V_{dark} Transmissometer dark response.
- $V_i(t_j)$ The i th spatial location at observation time t_j .
- V_M The radiance detector voltage while viewing the moon.
- V_S The irradiance detector voltage while viewing the sun.
- V_T Focal plane temperature sensor voltage output.

– W –

- w_m The weighting coefficient at each depth z_m .
- W Wind speed or equivalent bandwidth (depending on usage).
- W_d Direct irradiance divided by the total irradiance at the surface.
- W_s Diffuse irradiance divided by the total irradiance.
- W_θ Weighting function.

– X –

- x Abscissa or longitudinal coordinate, or the pixel number within a scan line (depending on usage).
- X ECEF x component of orbit position or depth in meters (depending on usage).
- \dot{X} ECEF X component of orbit velocity.

– Y –

- y Ordinate, meridional coordinate, or an empirical factor (depending on usage).
- Y ECEF y component of orbit position or the base 10 logarithm of the radiometric measurement E_d , E_u , or L_u (depending on usage).
- \dot{Y} ECEF Y component of orbit velocity.

– Z –

- z Vertical coordinate.
- z' Corrected depth for pressure transducer depth offset relative to a sensor.
- z_i The depth of a particular node.
- z_m Centered depth or the depth of the m th data point in a vertical radiometric profile (depending on usage).
- z_n The node depth number ($n = 0, \dots, N - 1$).
- z_r Shallow depth.
- z_s Exclusion depth due to data contamination.
- Z ECEF z component of orbit position.
- \dot{Z} ECEF Z component of orbit velocity.

– GREEK –

- α Percent albedo, tilt angle, formulation coefficient (intercept), the power constant in the Ångström formulation, or the exponential value in the expression relating the extinction coefficient to wavelength (depending on usage).
- α' A power law constant.
- α_0 A curve fitting constant.
- α_1 A curve fitting constant.
- α_2 A curve fitting constant.
- α_{750} Albedo at 750 nm.
- β A formulation coefficient (slope) or a constant in the Ångström formulation (depending on usage).
- β_i The extinction coefficient of either the first or second aerosol model when $i = 1$ or 2, respectively; or the filter absorption correction factor for scattering within the filter.
- $\beta(z, \lambda, \theta)$ Spectral volume scattering function.
- β_b The measured integral of the volume scattering function in the backward direction.
- γ The Ångström exponent.
- $\gamma(\lambda)$ The ratio of the aerosol optical thickness at wavelength λ to the aerosol optical thickness at 670 nm.
- $\gamma_{ij}(\xi)$ Hermitian cubic polynomial.
- δ The great circle distance from $\Psi_s(t_0)$ to $\Psi_s(t - t_0)$, the departure of each individual conversion factor from the mean, a relative difference, the absorption coefficient, or the cosine response asymmetry (depending on usage).
- Δk Equivalent bandwidth.
- ΔL The difference between L and L_0 .
- $\Delta L_W(670)$ The error in the water-leaving radiance for the red channel.
- Δp The difference in atmospheric pressure.
- Δp_{CO_2} Partial pressure difference of CO_2 between air and sea water.
- ΔP The difference in successive pixels or the pressure deviation from standard pressure, P_0 (depending on usage).
- Δt Time difference.
- $\Delta T(\lambda)$ The error in transmittance.
- Δz Half-interval depth increment.
- $\Delta\theta$ Angular increment.
- $\Delta\theta_s$ The error (in radians) in the knowledge of θ_s .
- $\Delta\lambda$ An interval in wavelength.
- $\Delta\rho_w(\lambda)$ The error in the water-leaving reflectance for the red channel.
- $\Delta\sigma(\lambda)$ The absolute error in spectral optical depth.
- $\Delta\tau_a$ The error in the aerosol optical thickness.
- $\Delta\omega$ The longitude difference from the sub-satellite point to the pixel.
- $\Delta\omega_s$ Longitude difference.
- ϵ Cosine collector response error or an atmospheric correction parameter (depending on usage).
- ϵ_{sun} Self-shading error for E_{sun} .
- ϵ_{sky} Self-shading error for E_{sky} .
- $\varepsilon(\lambda)$ $1 - e^{-k'\alpha(\lambda)r}$.
- η The bearing from the sub-satellite point to the pixel along the direction of motion of the satellite.

θ	The spacecraft zenith angle, spacecraft pitch, the polar angle of the line-of-sight at a spacecraft, or the centroid angle of the scattering measurement (depending on usage).	ρ	The Fresnel reflectivity, the weighted direct plus diffuse reflectance, or the average reflectance of the sea (depending on usage).
$\dot{\theta}$	Pitch rate.	$\tilde{\rho}$	The Fresnel reflectance for sun and sky irradiance.
θ_0	Polar angle of the direct sunlight or solar zenith angle (depending on usage).	$\rho(\lambda)$	The bidirectional reflectance.
θ_1	The intersection angle of circle one or the lower integration limit (depending on usage).	$\rho(\theta)$	Fresnel reflectance for viewing geometry.
θ_2	The intersection angle of circle two or the upper integration limit (depending on usage).	$\rho(\theta_0)$	Fresnel reflectance for solar geometry.
θ_{0w}	Refracted solar zenith angle.	$\rho_{c,i}$	Reflectance of clouds and ice.
θ_a	In-air measurement angle.	$\rho_g(\lambda)$	Gray card or plaque reflectance.
θ_i	Any nominal angle.	ρ_i	The reflectance of the sea of either the first or second aerosol model when $i = 1$ or 2, respectively.
θ_n	The zenith angle of the vector normal to the surface vector for which glint will be observed or an angular origin (depending on usage).	$\rho_i(\lambda)$	The reflectance where i may represent any of the following: m for measured; LU for look-up table; o for light scattered by the atmosphere; sfc for reflection from the sea surface; and w for water-leaving radiance.
θ_N	The angle with respect to nadir that the sea surface slopes to produce a reflection angle to the spacecraft or an angular terminus (depending on usage).	ρ_n	Sea surface reflectance for direct irradiance at normal incidence for a flat sea.
θ_s	Scan angle of sensor or the solar zenith angle (depending on usage).	ρ_N	Reflectance for diffuse irradiance.
θ'_s	Scan angle of sensor adjusted for tilt.	σ	One standard deviation of a set of data values.
θ_t	Tilt angle.	σ^2	The mean square surface slope distribution.
θ_w	In-water measurement angle.	$\sigma(\lambda)$	The spectral optical depth.
κ	An integration constant: $\kappa = A_d \pi r_1^2 (r_1^2 + r_2^2 + d^2)^{-1}$.	σ_i^2	$\sigma_i^2 = ((\log r - \log r_i)^2)$.
κ'	Self-shading coefficients.	σ_t	The density of sea water determined from the <i>in situ</i> salinity and temperature, but at atmospheric pressure.
λ	Wavelength of light.	σ_θ	The density of sea water determined from the <i>in situ</i> salinity and the potential temperature (θ), but at atmospheric pressure.
λ'	A channel of nominal wavelength or the Raman excitation wavelength (depending on usage).	τ	Vector of measured optical depths.
λ_0	Center wavelength.	$\tau(z, \lambda)$	Vertical profile of the spectral optical depth.
λ_1	Starting wavelength.	$\hat{\tau}(z, \lambda)$	The estimated vertical profile of the spectral optical depth.
λ_2	Ending wavelength.	τ_a	Aerosol optical thickness.
λ_i	A wavelength of light at a particular band.	τ_{ox}	Oxygen optical thickness at 750 nm.
λ_j	A wavelength of light at a particular band.	$\tau_{ox}(\lambda)$	Optical thickness due to oxygen absorption.
λ_m	Nominal center wavelength.	τ_{oz}	The optical thickness of ozone.
λ_n	Any nominal wavelength.	τ_r	Rayleigh optical thickness (due to scattering by the standard molecular atmosphere).
λ_r	Near-IR wavelength.	τ'_r	Pressure corrected Rayleigh optical thickness.
μ	Mean value or cosine of the satellite zenith angle (depending on usage).	τ_{ro}	Rayleigh optical thickness weighted by the SeaWiFS spectral response.
μ_0	Cosine of the solar zenith angle.	τ_{ro0}	Rayleigh optical thickness at standard atmospheric pressure, P_0 .
$\bar{\mu}_d(z, \lambda)$	Spectral mean cosine for downwelling radiance at depth z .	$\tau_s(\lambda)$	Spectral solar atmospheric transmission.
$\bar{\mu}_d(0^+, \lambda)$	Spectral mean cosine for downwelling radiance at the sea surface.	$\tau_s(\lambda)$	Spectral solar atmospheric transmission.
μ_s	The reciprocal of the effective optical length to the top of the atmosphere, along the line of sight to the sun.	τ_{wv}	The absorption optical thickness of water vapor.
ν_j	The j th temporal weighting factor.	ϕ	Azimuth angle of the line-of-sight at a spacecraft.
ξ	A local depth coordinate ranging from -1 at node z_{i-1} to $+1$ at node z_i .	ϕ_0	Azimuth angle of the direct sunlight.
ξ	Actual deployment distance.	Φ	Spacecraft azimuth angle or roll (depending on usage).
ξ_d	The calculated deployment distance for downwelling irradiance measurements.	$\dot{\Phi}$	Roll rate.
ξ_{EM}	The distance between the Earth and the moon.	Φ_D	The detector solid angle.
ξ_u	The calculated deployment distance for upwelling irradiance measurements.	Φ_M	The solid angle subtended by the moon at the measuring instrument.
ξ_L	The calculated deployment distance for upwelling radiance measurements.	Φ_0	Solar azimuth angle.
$\xi(\lambda)$	Minimum ship-shadow avoidance distance.	χ	Proportionality constant.
		Ψ	Pixel latitude or yaw (depending on usage).
		$\dot{\Psi}$	Yaw rate.
		Ψ_d	Solar declination latitude.
		$\Psi_s(t)$	Subsatellite latitude as a function of time.

SeaWiFS Technical Report Series Cumulative Index: Volumes 1–29

ω	Longitude variable or the surface reflection angle (depending on usage).	ω_i	Spatial weighting factor.
ω_0	Old longitude value.	ω_s	Longitude variable.
ω_a	Single scattering albedo of the aerosol.	Ω	Solar hour angle or the amount of ozone in Dobson units (depending on usage).
ω_e	Equator crossing longitude.

13. ABSTRACT (Maximum 200 words) The Sea-viewing Wide Field-of-view Sensor (SeaWiFS) is the follow-on ocean color instrument to the Coastal Zone Color Scanner (CZCS), which ceased operations in 1986, after an eight-year mission. SeaWiFS is expected to be launched in 1996, on the SeaStar satellite, being built by Orbital Sciences Corporation (OSC). The SeaWiFS Project at the National Aeronautics and Space Administration (NASA) Goddard Space Flight Center (GSFC), has undertaken the responsibility of documenting all aspects of this mission, which is critical to the ocean color and marine science communities. This documentation, entitled the <i>SeaWiFS Technical Report Series</i> , is in the form of NASA Technical Memorandum Number 104566. All reports published are volumes within the series. This particular volume serves as a reference, or guidebook, to the previous 29 volumes and consists of 5 sections including: an errata, an index to key words and phrases, a list of all references cited, and lists of acronyms and symbols used. It is the editors' intention to publish a cumulative index of this type after every five volumes in the series. Each index covers the reference topics published in all previous editions, that is, each new index will include all of the information contained in the preceding indices.
