ABSTRACT

The Sea-viewing Wide Field-of-view Sensor (SeaWiFS) is the follow-on ocean color instrument to the Coastal Zone Color Scanner (CZCS), which ceased operations in 1986, after an eight-year mission. SeaWiFS is expected to be launched in 1997, on the SeaStar satellite, being built by Orbital Sciences Corporation (OSC). The SeaWiFS Project at the National Aeronautics and Space Administration (NASA) Goddard Space Flight Center (GSFC), has undertaken the responsibility of documenting all aspects of this mission, which is critical to the ocean color and marine science communities. This documentation, entitled the *SeaWiFS Technical Report Series*, is in the form of NASA Technical Memorandum Number 104566. All reports published are volumes within the series. This particular volume serves as a reference, or guidebook, to the previous 35 volumes and consists of 6 sections including: an addenda, an errata, an index to key words and phrases, lists of acronyms and symbols used, and a list of all references cited. The editors publish a cumulative index of this type after every five volumes. Each index covers the reference topics published in all previous editions, that is, each new index includes all of the information contained in the preceding indices with the exception of any addenda.

1. INTRODUCTION

This is the sixth in a series of indices, published as a separate volume in the Sea-viewing Wide Field-of-view Sensor (SeaWiFS) Technical Report Series, and includes information found in the first 35 volumes of the series. The Report Series is written under the National Aeronautics and Space Administration's (NASA) Technical Memorandum (TM) Number 104566. The volume numbers, authors, and titles of the volumes covered in this index are:

- Vol. 1: Hooker, S.B., W.E. Esaias, G.C. Feldman, W.W. Gregg, and C.R. McClain, *An Overview of SeaWiFS and Ocean Color*.
- Vol. 2: Gregg, W.W., *Analysis of Orbit Selection for SeaWiFS: Ascending vs. Descending Node*.
- Vol. 3: McClain, C.R., W.E. Esaias, W. Barnes, B. Guenther, D. Endres, S.B. Hooker, B.G. Mitchell, and R. Barnes, *SeaWiFS Calibration and Validation Plan*.
- Vol. 4: McClain, C.R., E. Yeh, and G. Fu, *An Analysis of GAC Sampling Algorithms: A Case Study*.
- Vol. 5: Mueller, J.L., and R.W. Austin, *Ocean Optics Protocols for SeaWiFS Validation*.
- Vol. 6: Firestone, E.R., and S.B. Hooker, *SeaWiFS Technical Report Series Cumulative Index: Volumes 1-5*.
- Vol. 7: Darzi, M., *Cloud Screening for Polar Orbiting Visible and IR Satellite Sensors*.
- Vol. 8: Hooker, S.B., W.E. Esaias, and L.A. Rexrode, *Proceedings of the First SeaWiFS Science Team Meeting*.
- Vol. 9: Gregg, W.W., F. Chen, A. Mezaache, J. Chen, and J. Whiting, *The Simulated SeaWiFS Data Set*.

- Vol. 10: Woodward, R.H., R.A. Barnes, W.E. Esaias, W.L. Barnes, A.T. Mecherikunnel, *Modeling of the SeaWiFS Solar and Lunar Observations*.
- Vol. 11: Patt, F.S., C.M. Hoisington, W.W. Gregg, and P.L. Coronado, *Analysis of Selected Orbit Propagation Models*.
- Vol. 12: Firestone, E.R., and S.B. Hooker, *SeaWiFS Technical Report Series Cumulative Index: Volumes 1-11*.
- Vol. 13: McClain, C.R., J.C. Comiso, R.S. Fraser, J.K. Firestone, B.D. Schieber, E-n. Yeh, K.R. Arrigo, and C.W. Sullivan, *Case Studies for SeaWiFS Calibration and Validation, Part 1*.
- Vol. 14: Mueller, J.L., *The First SeaWiFS Intercalibration Round-Robin Experiment, SIRREX-1, July 1992*.
- Vol. 15: Gregg, W.W., F.S. Patt, and R.H. Woodward, *The Simulated SeaWiFS Data Set, Version 2*.
- Vol. 16: Mueller, J.L., B.C. Johnson, C.L. Cromer, J.W. Cooper, J.T. McLean, S.B. Hooker, and T.L. Westphal, *The Second SeaWiFS Intercalibration Round-Robin Experiment, SIRREX-2, June 1993*.
- Vol. 17: Abbott, M.R., O.B. Brown, H.R. Gordon, K.L. Carder, R.E. Evans, F.E. Muller-Karger, and W.E. Esaias, *Ocean Color in the 21st Century: A Strategy for a 20-Year Time Series*.
- Vol. 18: Firestone, E.R., and S.B. Hooker, *SeaWiFS Technical Report Series Summary Index: Volumes 1-17*.

- Vol. 19: McClain, C.R., R.S. Fraser, J.T. McLean, M. Darzi, J.K. Firestone, F.S. Patt, B.D. Schieber, R.H. Woodward, E-n. Yeh, S. Mattoo, S.F. Biggar, P.N. Slater, K.J. Thome, A.W. Holmes, R.A. Barnes, and K.J. Voss, *Case Studies for SeaWiFS Calibration and Validation, Part 2*.
- Vol. 20: Hooker, S.B., C.R. McClain, J.K. Firestone, T.L. Westphal, E-n. Yeh, and Y. Ge, *The SeaWiFS Bio-Optical Archive and Storage System (SeaBASS), Part 1*.
- Vol. 21: Acker, J.G., *The Heritage of SeaWiFS: A Retrospective on the CZCS NIMBUS Experiment Team (NET) Program*.
- Vol. 22: Barnes, R.A., W.L. Barnes, W.E. Esaias, and C.R. McClain, *Prelaunch Acceptance Report for the SeaWiFS Radiometer*.
- Vol. 23: Barnes, R.A., A.W. Holmes, W.L. Barnes, W.E. Esaias, C.R. McClain, and T. Svitek, *SeaWiFS Prelaunch Radiometric Calibration and Spectral Characterization*.
- Vol. 24: Firestone, E.R., and S.B. Hooker, *SeaWiFS Technical Report Series Summary Index: Volumes 1–23*.
- Vol. 25: Mueller, J.L., and R.W. Austin, *Ocean Optics Protocols for SeaWiFS Validation, Revision 1*.
- Vol. 26: Siegel, D.A., M.C. O'Brien, J.C. Sorenson, D.A. Konnoff, E.A. Brody, J.L. Mueller, C.O. Davis, W.J. Rhea, and S.B. Hooker, *Results of the SeaWiFS Data Analysis Round-Robin (DARR-94), July 1994*.
- Vol. 27: Mueller, J.L., R.S. Fraser, S.F. Biggar, K.J. Thome, P.N. Slater, A.W. Holmes, R.A. Barnes, C.T. Weir, D.A. Siegel, D.W. Menzies, A.F. Michaels, and G. Podesta, *Case Studies for SeaWiFS Calibration and Validation, Part 3*.
- Vol. 28: McClain, C.R., K.R. Arrigo, W.E. Esaias, M. Darzi, F.S. Patt, R.H. Evans, J.W. Brown, C.W. Brown, R.A. Barnes, and L. Kumar, *SeaWiFS Algorithms, Part 1*.
- Vol. 29: Aiken, J., G.F. Moore, C.C. Trees, S.B. Hooker, and D.K. Clark, *The SeaWiFS CZCS-Type Pigment Algorithm*.
- Vol. 30: Firestone, E.R., and S.B. Hooker, *SeaWiFS Technical Report Series Summary Index: Volumes 1–29*.
- Vol. 31: Barnes, R.A., A.W. Holmes, and W.E. Esaias, *Stray Light in the SeaWiFS Radiometer*.
- Vol. 32: Campbell, J.W., J.M. Blaisdell, and M. Darzi, *Level-3 SeaWiFS Data Products: Spatial and Temporal Binning Algorithms*.
- Vol. 33: Moore, G.F., and S.B. Hooker, *Proceedings of the First SeaWiFS Exploitation Initiative (SEI) Team Meeting*.
- Vol. 34: Mueller, J.L., B.C. Johnson, C.L. Cromer, S.B. Hooker, J.T. McLean, and S.F. Biggar, *The Third SeaWiFS Intercalibration Round-Robin Experiment (SIRREX-3), 19–30 September 1994*.
- Vol. 35: Robins, D.B., A.J. Bale, G.F. Moore, N.W. Rees, S.B. Hooker, C.P. Gallienne, A.G. Westbrook, E. Marañón, W.H. Spooner, and S.R. Laney, *AMT-1 Cruise Report and Preliminary Results*.

This volume within the series serves as a reference, or guidebook, to the aforementioned volumes. It consists of the four main sections included with the first two indices published, Volumes 6 and 12, in the series: a cumulative index to key words and phrases, a glossary of acronyms, a list of symbols used, and a bibliography of all references cited in the series. In addition, as in Volumes 12, 18, and 24, an errata section has been added to address issues and needed corrections that have come to the editors' attention since the volumes were first published. Also, as in some of the previous indices, an addenda section has been added to include the proceedings of various workshops, which are too short in length to warrant a separate volume within the series.

The nomenclature of the index is a familiar one, in the sense that it is a sequence of alphabetical entries, but it utilizes a unique format since multiple volumes are involved. Unless indicated otherwise, the index entries refer to some aspect of the SeaWiFS instrument or project, for example, the *mission overview* index entry refers to an overview of the SeaWiFS mission. An index entry is composed of a keyword or phrase followed by an entry field that directs the reader to the possible locations where a discussion of the keyword can be found. The entry field is normally made up of a volume identifier shown in bold face, followed by a page identifier, which is always enclosed in parentheses:

keyword, **volume**(pages).

If an entry is the subject of an entire volume, the volume field is shown in slanted type without a page field:

keyword, **Vol. #**.

An entry can also be the subject of a complete chapter. In this instance, both the volume number and chapter number appear without a page field:

keyword, **volume(ch. #)**.

Figures or tables that provide particularly important summary information are also indicated as separate entries in the page field. In this case, the figure or table number is given with the page number on which it appears.

keyword, **volume**(Fig. # p. #).

or

keyword, **volume**(Table # p. #).

2. ERRATA

Note: Since the issuance of previous volumes, a number of the references cited have changed their publication status, e.g., they have gone from "submitted" or "in press" to printed matter. In other instances, some part (or parts) of the citation, e.g., the title or year of publication, has changed or was printed incorrectly. Listed below are the references in question as they were cited in one or more of the first 35 volumes in the series, along with how they now appear in the references section of this volume.

3. ADDENDA

This section presents summaries of the Sixth SeaWiFS Bio-optical Algorithm and Optical Protocols Workshop (BAOPW-6) and the Case-2 Water Measurement Protocol Workshop held 18–21 March 1996 at the National Institute of Standards and Technology (NIST), in Gaithersburg, Maryland; submitted by C. McClain. It also presents a summary of the Seventh SeaWiFS Bio-optical Algorithm and Optical Protocols Workshop (BAOPW-7) held on 21 October 1996 at the Sheraton Halifax Hotel in Halifax, Nova Scotia; submitted by C. McClain.

3.1 BAOPW-6

The primary workshop objectives of BAOPW-6 were to:

1. Review the status of the initial operational SeaWiFS pigment and chlorophyll *a* algorithms.
2. Review the field programs and bio-optical data sets.
3. Discuss the measurement protocol updates, [fifth SeaWiFS Intercalibration Round-Robin Experiment (SIRREX-5)], and data analysis round-robbins.

The team members and invited guests are listed in Table 1.

 - b. SIRREX-5 Objectives and Status (S. Hooker and C. Johnson)

3.1.1 Meeting Action Items

The following action items arose from the meeting; the people responsible for them are also presented.

1. The revised *K*(490) algorithm, which was presented by J. Mueller should be adopted as the SeaWiFS operational algorithm.
2. The SeaWiFS Project should work with A. Morel on implementing (prior to launch) and testing (off line, postlaunch) the variable *Q* factor algorithm.
3. C. Trees and G. Mitchell will host a workshop on beta factor determination and related topics sometime this year.
4. D. Clark will host a workshop on the estimation of water-leaving radiances from sparsely sampled vertical profiles, e.g., moorings and drifters.

3.2 Case-2 Water Measurement Protocols

This workshop commenced after BAOPW-6 and took place Tuesday afternoon through Thursday, 19–21 May

1996. The purpose of this workshop was to refine the optical measurement protocols for turbid water. The standard methodology for measuring normalized water-leaving radiance and remote sensing reflectance (R_{rs}), is to measure downwelling irradiance and upwelling radiance profiles. These profile data are then used to extrapolate the irradiance and radiance values through the air-water interface in order to estimate the above surface values. The normalized water-leaving radiance and R_{rs} are computed using these values. Because of high extinction coefficients and bottom reflectance, these procedures do not work well in turbid coastal waters. To overcome this problem, a number of groups are using specialized radiometers, or alternate methods to assess R_{rs} in coastal waters. This workshop began the process of establishing SeaWiFS optical protocols for turbid waters and initial protocols were distributed. The goal of the workshop was to develop a revised version of the protocols. The revised protocols would be tested during SIRREX-5 in July 1996, and a final version would be published by the end of 1996.

A. Tuesday Afternoon, 19 March

1. Statement of the Problem and Goals of the Workshop (C. Davis)
2. Radiance and Irradiance Profile Measurements for Turbid Waters (K. Carder, discussion leader)
 - a. Turbid water radiometer with fiber optic heads (D. Clark)
 - b. A full spectral system: the Submersible Upwelling and Downwelling Spectrometer (SUDS) (K. Carder)
 - c. Shadowing, calibration, and other considerations (J. Mueller)
 - d. Tethered spectral radiometer and K -chain (S. McLean)
3. Group Discussion of Draft Protocols

B. Wednesday Morning, 20 March

1. Brief Presentation on High Performance Liquid Chromatography (HPLC) Versus Fluorometric Pigment Measurements (C. Trees)
2. Measurement of R_{rs} Using Reflectance Plaques (C. Davis, discussion leader)
 - a. R_{rs} as measured at the Naval Research Laboratory (NRL) (C. Davis)
 - b. R_{rs} as measured at GKSS (R. Doerffer)
 - c. Improved model for calculation of R_{rs} (K. Carder)
 - d. Surface reflectance as a function of view angle and wind speed (C. Mobley)
3. Group Discussion of Draft Protocols

C. Wednesday Afternoon

4. Ambrose Tower Project Update (C. Woodie, presentation originally scheduled for Monday, but postponed due to schedule conflict)

5. Estimating R_{rs} From Measurements of Inherent Optical Properties (IOPs) (D. Siegel, discussion leader)
 - a. AC-9 and related instruments (S. Pegau)
 - b. Validation of water-leaving radiances using air-bore active-passive measurements (F. Hoge)
 - c. Spectral backscatter and beam attenuation sensor (R. Maffione)
 - d. Modeling considerations (R. Maffione)

C. Thursday Morning, 21 March

1. This session was a small group meeting to organize writing assignments for a revision of the Case-2 protocols and to discuss plans for SIRREX-5 field measurements.

3.2.1 Meeting Action Items

The following action items arose from this meeting.

1. A draft of the Case-2 protocols document will be completed by August.
2. SIRREX-5 (July) will provide an opportunity to test some of the protocols. A final version of the protocols will be completed and submitted to the SeaWiFS Project by the end of the calendar year.

3.3 BAOPW-7

The primary workshop objectives of BAOPW-7 were to:

1. Review the status of the initial operational SeaWiFS pigment and chlorophyll *a* algorithms.
2. Review the field programs and bio-optical data sets.
3. Discuss the measurement protocol updates and SIRREX-5.

The team members and invited guests are listed in Table 2.

A. Monday Morning, 21 October

1. Introduction (C. McClain)
 - a. Workshop Objectives and Agenda
 - b. SeaStar and SeaWiFS Updates
2. NASA Research Announcement (NRA) and Sensor Intercomparison and Merger for Biological and Interdisciplinary Ocean Studies (SIMBIOS) Program Update (J. Yoder)
3. Bio-optical Algorithm Session (20 minutes per presentation)
 - a. Operational chlorophyll *a* algorithm update (S. Hawes)
 - b. CZCS pigment algorithm update (G. Moore)
 - c. CalCoFI pigment algorithm comparisons (M. Kahru)

Table 2. Team members and invited guests to the BAOPW-7, held 21 October 1996 at the Sheraton Halifax Hotel in Halifax, Nova Scotia. The subgroup memberships are as listed in Hooker et al. (1993). Attendees are identified with a checkmark (✓).

 - c. Protocols for R_{rs} measurements (Z. Lee)
 - d. Absorption measurement comparison results (D. Phinney)
 - e. Protocol revisions, in general (J. Mueller)

3.3.1 Meeting Action Items

The following action items arose from the meeting.

1. D. Siegel will host a small algorithm working group meeting in January to reach a final consensus on the pigment and chlorophyll *a* algorithms. Good progress has been made, but some discrepancies and issues remain.
2. J. Mueller will begin the next round of protocol revisions.

3.4 Invited Colleagues' Addresses

Following are the names and addresses of attendees of the various workshops presented in Sections 3.1-3.3. Members of the various teams and panels are identified with their team names(s) shown in *italicized* type face.

CUMULATIVE INDEX

Unless otherwise indicated, the index entries that follow refer to some aspect of the SeaWiFS instrument or project. For example, the *mission overview* index entry refers to an overview of the SeaWiFS mission.

- A -

absorption study:

pressure and oxygen, **13**(ch. 3).

absorption correction, **13**(19–20).

acceptance report:

prelaunch, *see* SeaWiFS instrument.

addenda, **12**(3–8); **18**(3–22); **24**(2–5).

Advanced Very High Resolution Radiometer, *see* AVHRR.

aerosols:

atmospheric, **5**(15); **19**(26–27, 30–32, Fig. 16 p. 31); **25**(19).

models, *see* models, aerosol.

optical depth, **5**(38); **19**(ch. 1, 30); **25**(55); **33**(3).

airborne spectral radiometry, **5**(7–8).

aircraft calibration technique, **3**(Fig. 19 p. 27).

algorithms, **1**(3, 17); **4**(2); Vol. 28.

atmospheric correction, **1**(19); **3**(1–2, Fig. 4 p. 5, 16, 23, 27–28, 31, 32–34); **8**(4, Table 1 p. 14, 17, Table 4 p. 21); **13**(1, 4, 9, 27); **17**(16); **18**(11–12); **21**(19–20); **28**(6); **33**(3–11).

band-ratio, **29**(8–9, Tables 4–6 p. 9, 9–12, Fig. 8 p. 17, Fig. 9 p. 19).

binning and interpreting, **32**(65–69).

bio-optical, Vol. 5; **12**(3–5); **20**(ch. 3); **25**(5).

data, **9**(1); **12**(3–4).

database development, **3**(28).

derived products, **3**(27–28); **13**(1).

development, **1**(5); **3**(23, 27–35, Fig. 22 p. 33); **5**(Table 4 p. 11); **8**(4, 10).

field studies, **3**(30–32, Fig. 22 p. 33, 34–35).

input values, **13**(Table 16 p. 44).

iterative fitting, **33**(33).

level-2 processing, **28**(ch. 5).

linearity and stability, **5**(12).

optical measurements, Vol. 5.

pigment, **3**(28, 29); **8**(24); **13**(1, 12); **18**(3, 4, 14); **24**(3); Vol. 29.

spatial binning, **24**(3); Vol. 32.

temporal binning, Vol. 32.

validation of, **1**(3); **8**(16, Table 4 p. 21).

see also atmospheric correction, algorithm.

see also bio-optical, algorithm.

see also GAC.

see also level-2 processing.

see also NET, pigment algorithm.

see also Protocols Workshop.

along-scan:

correction, **31**(23, Table 11 p. 28, 29, Table 12 p. 29).

responses, **31**(20–21, Table 8 p. 21, Table 14 p. 65).

test results, **31**(29, Figs. 19–34 p. 30–45, Table 13 pp. 46–48, Figs. 35–50 p. 49–64).

along-track:

direction, **31**(Figs. 7–8 p. 13, 16, Figs. 17–18 pp. 26–27).

response, **3**(38); **31**(21–23, Table 9 p. 22).

see also propagation model.

AMT, Vol. 35.

biogeochemical measurements, **35**(3).

bio-optical measurements, **35**(2–3).

circulation and backscatter, **35**(31, 46, Fig. 29 p. 48).

cruise participants, **35**(83).

dissolved gases, **35**(46, Fig. 31 p. 50).

fluorometry and photochemistry, **35**(25–26, Fig. 12 p. 29, 39, Figs. 23–24 p. 41–42, 43).

future plans, **35**(61).

hydrography, **35**(18, Fig. 10 p. 24, 31, Figs. 17–18 pp. 34–35, 36).

inorganic nutrients, **35**(31, 46, Fig. 30 p. 49).

lessons learned, **35**(61).

methodology, **35**(2).

optics, **35**(25, Tables 8–9 p. 25, Fig. 11 p. 27, 36–39, Fig. 20 p. 38, Figs. 21–22 pp. 40–41).

photosynthesis and calcification, **35**(26, Fig. 13 p. 29, 43, Figs. 25–26 pp. 44–45).

physical measurements, **35**(2).

pigment extractions, **35**(26, 43, Fig. 27 p. 45, Tables J1–J3 pp. 77–79).

size fractionation, **35**(31, Fig. 26 p. 45, 46).

zooplankton characterization, **35**(14–15, 26, Fig. 14 p. 30, 46, Fig. 28 p. 47).

SYMBOLS

- A -

- a The semi-major axis of the Earth's orbit, a formulation constant, a constant equal to 0.983, a constant equal to $-20/\tanh(2)$; an exponential value in the expression relating the radiance of scattered light to wavelength; or a regression coefficient (depending on usage).
- \bar{a} The measured value of a .
- a' The absorption at the Raman excitation wavelength.
- $a(\lambda)$ Total absorption coefficient.
- $a(z, \lambda)$ Spectral absorption coefficient.
- a_a The specific absorption of chlorophyll a .
- a_{abc} The specific absorption of chlorophylls a , b , and c .
- a_b The specific absorption of chlorophyll b .
- a_c The specific absorption of chlorophyll c .
- $a_e(\lambda)$ Absorption coefficient due to substances other than water.
- $a_f(z, \lambda) = a_p(\lambda) - a_t(z, \lambda)$.
- a_g The DOM/detritus specific absorbance.
- $a_g(\lambda)$ Gelbstoff spectral absorption coefficient.
- a_i Cubic polynomial coefficients.
- $a_i(\lambda_a, T)$ Initial estimate of the apparent absorption coefficient; used for determining the apparent absorption coefficient for substances other than water.
- a_N Normalized absorption coefficient.
- a_o Oxygen absorption coefficient.
- a_{ox} Coefficient for oxygen absorption.
- a_{oz} Coefficient for ozone absorption.
- $a_p(\lambda)$ Particulate spectral absorption coefficient.
- a_{PP} The specific absorption of PPC.
- $a_{ps}(\lambda)$ Photosynthetically active pigment spectral absorption coefficient.
- a_{PS} The specific absorption of PSC.
- $a_s(\lambda)$ The sediment specific absorption coefficient.
- $a_t(\lambda)$ Tripton spectral absorption coefficient.
- $a_w(\lambda)$ The absorption coefficient for pure water.
- a_{wv} Coefficient for water vapor absorption.
- a_ϕ The DOM/chlorophyll combined absorbance.
- $a_\phi(\lambda)$ Phytoplankton pigment spectral absorption coefficient.
- $a_\phi^M(\lambda)$ Phytoplankton pigment spectral absorption coefficient determined in methanol extract.
- A Fitting coefficient for $P_4 - X$, or clearance area of a filter (depending on usage).
- $A(k)$ Absorptivity.
- $A(\lambda)$ Coefficient for calculating $b_b(\lambda)$.
- $A(\lambda_a)$ AC-9 instrument calibration factor for absorption.
- $A(\lambda_c)$ AC-9 instrument calibration factor for beam attenuation.
- A_0 Coefficient for the linear term in the scan modulation correction equation.
- A_d The detector aperture.
- $A_d(\bar{z}, \lambda)$ Linear regression intercepts at the center of a fitted depth interval for \ln of $A_d(z, \lambda)$ (defined in Vol. 26).
- A_f The foam reflectance.
- A_i The intersection area or an arbitrary constant (depending on usage).
- A'_i An arbitrary constant.
- A_j An arbitrary constant.
- A'_j An arbitrary constant.
- $A_l(\bar{z}, \lambda)$ Linear regression intercepts at the center of a fitted depth interval for \ln of $A_l(z, \lambda)$ (defined in Vol. 26).
- $A_u(\bar{z}, \lambda)$ Linear regression intercepts at the center of a fitted depth interval for \ln of $A_u(z, \lambda)$ (defined in Vol. 26).

- B -

- b A formulation coefficient, a constant equal to $1/3$, or a regression coefficient (depending on usage).
- $b(z, \lambda)$ The total scattering coefficient.
- $b(\theta, z, \lambda_0)$ Volume scattering coefficient.
- b_b Backscattering coefficient.
- $\tilde{b}_b(\lambda)$ The backscatter ratio (b_b/b).
- $b_b(z, \lambda)$ The spectral backscattering coefficient.
- $b_{bc}(\lambda)$ The spectral backscattering coefficient for phytoplankton.
- b_{bp} The particle specific backscatter coefficient (usually normalized to chlorophyll a concentration).
- b_{bw} The backscatter coefficient of water.
- $b_i(\lambda)$ Initial estimate of the particle scattering coefficient; used for determining the apparent particle scattering coefficient for substances other than water.
- b_{\min} Scattering associated with phytoplankton (Prieur and Sathyendranath 1981).
- $b_p(\lambda)$ Total particle scattering.
- $b_r(\lambda)$ Total Raman scattering coefficient.
- b_R The Raman scattering coefficient.
- $b_s(\lambda)$ The sediment specific scattering coefficient.
- $b_w(\lambda)$ The total scattering coefficient for pure seawater.
- $b1(k)$ Input data for polarization calculations for SeaWiFS band 1.
- $b7(k)$ Input data for polarization calculations for SeaWiFS band 7.
- B Excess target radiance, the fitting coefficient for e^{B/P_5} , the width of band 7, a variable in the expression for limiting reflectance (R_{\lim}), defined as $0.33b/K_d$, or an empirical constant. (depending on usage).
- $B(\lambda)$ Coefficient for calculating $b_b(\lambda)$.
- B_0 Coefficient for the power term in the scan modulation correction equation.
- B_1 BBOP casts 1 m from the ship's stern.
- B_6 BBOP casts 6 m from the ship's stern.
- B_b An empirical constant dependent on the backscatter ratio.
- $B_b(\lambda)$ Greybody radiance model.

- C -

- \bar{c} The measured value of c .
- $c(z, \lambda)$ Spectral beam attenuation coefficient.
- $c(z, 660)$ Red beam attenuation (at 660 nm).
- $c_e(\lambda)$ Corrected non-water beam attenuation coefficient.
- $c_i(\lambda)$ Initial estimate of the beam attenuation coefficient (used for determining the apparent beam attenuation coefficient for substances other than water).
- $c_p(\lambda)$ Beam attenuation coefficient due to particles.
- $c_w(\lambda)$ Beam attenuation coefficient for pure water equal to $a_w(\lambda) + b_w(\lambda)$.
- $[chl. a]/K$ Concentration of chlorophyll a over K , the diffuse attenuation coefficient.
- C Chlorophyll a pigment, or just pigment concentration.
- $C'(\lambda)$ AC-9 factory calibration coefficient.
- $C'_r(\lambda)$ Additional AC-9 factory calibration coefficient.
- C_1 Measured value for the flight diffuser on a given scan line in counts, or a polynomial regression factor (depending on usage).
- C_2 Measured value of the flight diffuser for the scan line immediately sequential to the first scan line used to measure the flight diffuser (i.e., S_1 in counts).

C_{13}	Pigment concentration derived using CZCS bands 1 and 3.	$E_d(0, \lambda)$	Surface irradiance.
C_{23}	Pigment concentration derived using CZCS bands 2 and 3.	$E_d(0^-, \lambda)$	Incident spectral irradiance.
C_a	The concentration of chlorophyll <i>a</i> .	$E_d(z, \lambda)$	Downwelling spectral irradiance profile.
C_{abc}	The concentration of chlorophylls <i>a</i> , <i>b</i> , and <i>c</i> .	$E'_d(z, \lambda)$	Normalized downwelled spectral irradiance.
C_b	The concentration of chlorophyll <i>b</i> .	E_{end}	Ending irradiance value.
C_c	The concentration of chlorophyll <i>c</i> .	$E_{meas}(\lambda)$	Measured radiance.
C_{dark}	Instrument dark restore value, in counts.	$E_s(z, \lambda)$	Vertical profile of surface irradiance.
C_{est}	Estimated chlorophyll concentration.	$\tilde{E}_s(z_m, \lambda)$	Defined as $H\vec{E}_s(\lambda)$.
C_{ext}	Average total extinction cross-section of a particle.	$E_s(\lambda)$	Surface irradiance.
C_F	The calibration factor.	$\vec{E}_s(\lambda)$	The measured irradiance vector of length M .
C_{out}	Instrument output, in counts.	$\vec{E}_{s,i}(\lambda)$	The value of $E_s(z, \lambda)$ at node depth z_i .
C_P	Phaeopigment concentration.	$E_{ref}(\lambda)$	Reference radiance.
C_{PP}	PPC concentration.	E_{rem}	Percentage of energy removed from a wavelength band.
C_{PS}	PSC concentration.	$E_{sky}(\lambda)$	Spectral sky irradiance distribution.
$C_r(\lambda)$	Digital response of reference detector.	$E_{sun}(z, \lambda)$	Spectral sun irradiance distribution.
C_{ref}	Reference chlorophyll value (0.5).	$E_u(z, \lambda)$	Upwelling spectral irradiance profile.
C_S	Simulated C .	$E_u(0^-, \lambda)$	Upwelling spectral irradiance just beneath the sea surface.
C_{sed}	Sediment concentration (SPM).	$E_w(z, \lambda)$	Irradiance in water.
$C_t(\lambda)$	Digital response of water transmission detector.	$E_{WN}(\lambda)$	Normalized water-leaving irradiance.
C_{temp}	Temperature sensor output, in counts, represented by an 8-bit digital word in the SeaStar telemetry.		
C_{TP}	Total pigment concentration.		
$[C + P]$	Pigment concentration defined as mg chlorophyll <i>a</i> plus phaeopigments m^{-3} .		

— D —

d	The distance between source and detector apertures.
$d(I(\lambda))$	An increment in detector current.
d_i	Distance from the i th observation point to the point of interest.
d_j	Distance from the j th observation point to the point of interest.
ds	Detector configuration datum.
$d\lambda$	An increment in wavelength.
D	Sequential day of the year.
\tilde{D}	Orbit position difference vector.
D_{at}	Along-track position difference.
D_{ct}	Cross-track position difference.
D_{rad}	Radial position difference.
DC	Digital count (value), or direct current (depending on usage).
DC_{10}	Digital counts at 10-bit digitization.
DC_{meas}	The digital counts measured unshadowed.
DC_{scat}	The digital counts due to scattered sunlight.
DC_{TOA}	The digital counts measured at the top of the atmosphere.

— E —

e	Orbit eccentricity of the Earth.
$\hat{E}(z, m)$	A smoothed estimate of irradiance obtained by a least-squares regression fit in the center of a depth interval.
$E(\lambda)$	Spectral irradiance.
$E(\lambda, 50)$	Spectral irradiance measured at 50 cm from a source.
E_0	Incident downwelling irradiance.
E'_0	The downwelling irradiance at the Raman excitation wavelength.
$E_a(\lambda)$	Irradiance in air.
E_{beg}	Beginning irradiance value.
E_{cal}	Calibration source irradiance.
$E_d(\lambda)$	Incident downwelling irradiance.

$E_d(0, \lambda)$	Surface irradiance.
$E_d(0^-, \lambda)$	Incident spectral irradiance.
$E_d(z, \lambda)$	Downwelling spectral irradiance profile.
$E'_d(z, \lambda)$	Normalized downwelled spectral irradiance.
E_{end}	Ending irradiance value.
$E_{meas}(\lambda)$	Measured radiance.
$E_s(z, \lambda)$	Vertical profile of surface irradiance.
$\tilde{E}_s(z_m, \lambda)$	Defined as $H\vec{E}_s(\lambda)$.
$E_s(\lambda)$	Surface irradiance.
$\vec{E}_s(\lambda)$	The measured irradiance vector of length M .
$\vec{E}_{s,i}(\lambda)$	The value of $E_s(z, \lambda)$ at node depth z_i .
$E_{ref}(\lambda)$	Reference radiance.
E_{rem}	Percentage of energy removed from a wavelength band.
$E_{sky}(\lambda)$	Spectral sky irradiance distribution.
$E_{sun}(z, \lambda)$	Spectral sun irradiance distribution.
$E_u(z, \lambda)$	Upwelling spectral irradiance profile.
$E_u(0^-, \lambda)$	Upwelling spectral irradiance just beneath the sea surface.
$E_w(z, \lambda)$	Irradiance in water.
$E_{WN}(\lambda)$	Normalized water-leaving irradiance.

— F —

f	The fraction of the surface covered by foam, the ratio of sensor-to-instrument diameters, or a factor relating IOPs to irradiance reflectance (depending on usage).
f_i	Filter number, $i=0-11$.
$f(T)$	Offset voltage correction from the linear function characterizing temperature response.
$f(\lambda)$	Instrument spectral response function.
f -ratio	The ratio of new to total production.
F	Fluorescence.
\bar{F}	Arithmetic average.
$\overline{F}(\lambda)$	A mean conversion factor.
$F(\lambda)$	A calibration factor.
$F(\lambda)$	A conversion factor to convert PR714 readings to the GSFC sphere radiance scale.
$F(\bar{\lambda})$	Average of calibration factors.
F_0	The extraterrestrial irradiance corrected for Earth-sun distance, or initial fluorescence (depending on usage).
F_0	The scalar value of the solar spectral irradiance at the top of the atmosphere, multiplied by a columnar matrix of the four Stokes parameters (1/2, 1/2, 0, 0).
\overline{F}_0	Mean solar irradiance.
F'_0	Extraterrestrial irradiance corrected for the atmosphere.
$F_0(\lambda)$	Mean extraterrestrial spectral irradiance.
$\overline{F}_0(\lambda)$	Mean extraterrestrial irradiance.
F_1	Pigment biomass loading factor.
F_2	Detritus concentration loading factor.
F_3	Carotenoid concentration (or relative pigment abundance) loading factor.
F_a	Forward scattering probability of the aerosol.
F_d	The total flux incident on the surface if it did not reflect light.
F'_d	The total flux incident on the surface, corrected for surface reflection.
F'_d	The scalar value of the total flux incident on the surface, corrected for surface reflection, multiplied by a columnar matrix of the four Stokes parameters.

F_{GAC} A GAC correction factor. F_i A correction factor, or an immersion coefficient (depending on usage). F_m Total sample maximal fluorescence (directly comparable to values measured by standard active fluorometers). F_{SL} A correction factor for stray light. $F_v(\lambda)$ Field-of-view coefficient or variable fluorescence, $F_m - F_0$.

- G -

 g A constant that consists of the ratios of the air-sea interface effects, the effects of the light field, and the relative spectral variation of Q . $g(T)$ Coefficient of a linear function characterizing temperature response. g_1 A constant equal to 0.82. g_2 A constant equal to -0.55. g_{ij} Integrals of γ_{ij} (defined in Vol. 26). g_s Gain selection datum. G Gain factor or the concentration of DOM and DOM-like absorbers (depending on usage). $G(z, \lambda)$ Solid angle dependence with water depth. $G(\lambda) \dot{R}_a(\lambda_i)/\dot{R}_a(670) = (670/\lambda)^{\gamma} T_{2r}(670)/T_{2r}(\lambda_i)$. $G(u_0, \lambda)$ The effect of the downwelling light field. G_1 Gain setting 1. G_2 Gain setting 2. G_3 Gain setting 3. G_4 Gain setting 4. G_e Gravitational constant of the Earth (398,600.5 km³ s⁻²). G_n Gain factor at gain setting n .

- H -

 $h(k)$ Residual values without the calculated sinusoidal response. $h(\lambda)$ Normalized response function. h_{ij} Analytic integral coefficients over the Hermitian polynomials γ_{ij} . h_{mj} Matrix elements (defined in Vol. 26). \mathbb{H} Matrix of coefficients h_{ij} , or $[h_{mj}]$ (depending on usage). $H(\lambda_i; \lambda_j)$ Pigment calculated from the hyperbolic transform of $L_{i;j}$. H_{GMT} GMT in hours. H_M The measured moon irradiance. H_s Altitude of the spacecraft (for SeaStar 705 km).

- I -

 i Inclination angle, interval index, or variable infrared bands (depending on usage). i' Inclination angle minus 90°. I Rayleigh intensity. $I(\lambda)$ Detector current. I_0 Surface downwelling irradiance. I_1 Radiant intensity after traversing through an absorbing medium. I_2 Reflected radiant energy received by the satellite sensor. I_{max} Recorded maximum instrument output in response to linearly polarized light. I_{min} Recorded minimum instrument output in response to linearly polarized light. ICS Current from the current source diode.

- J -

 j Interval index, or variable infrared bands (depending on usage). J_2 The J_2 gravity field term (0.0010863). J_3 The J_3 gravity field term (-0.0000254). J_4 The J_4 gravity field term (-0.0000161). J_5 The J_5 gravity field term.

- K -

 k Wavenumber of light ($1/\lambda$), the fractional factor of total particle scattering, the molecular absorption cross-section area, or an index to two vectors of band ratios k_1 and k_2 (depending on usage). k' $y/\tan \theta_{0w}$. k_1 Beginning wavenumber, or a band ratio vector (depending on usage). k_2 Ending wavenumber, or a band ratio vector (depending on usage). k_c Wavelength independent fraction. $k_c(\lambda)$ Spectral fit coefficient weighted over the SeaWiFS bands; $k'_c(\lambda)$ also used. k_s A constant related to a_s and b_s . \bar{K} Vector of \bar{K}_n . $K(\lambda)$ Generic irradiance attenuation coefficient. $K(z, \lambda)$ Diffuse attenuation coefficient. $K(440)$ Diffuse attenuation coefficient of seawater measured at 440 nm. $K(490)$ Diffuse attenuation coefficient of seawater measured at 490 nm. $K_0(\lambda)$ Diffuse attenuation coefficient at $z = 0$. K_1 Primary instrument sensitivity factor. K_2 Gain factor. K_3 Temperature dependence of detector output. K_4 Scan modulation correction factor. K_5 Spacecraft analog-to-digital conversion factor. K_6 Analog-to-digital offset in spacecraft conversion. K_7 Current from the diode at 20°C. $K_c(\lambda)$ Attenuation coefficient for phytoplankton. K_d Diffuse attenuation coefficient for downwelling irradiance. $K_d(z, \lambda)$ Vertical profile of the diffuse attenuation coefficient for the downwelling irradiance spectrum. $K'_d(z, \lambda)$ $K_d(z, \lambda)$ determined by least squares regression over a depth interval. $K_E(\lambda)$ Attenuation coefficient downwelled irradiance. $K_g(\lambda)$ Attenuation coefficient for Gelbstoff. K_i A correction constant at the i th pixel. $K_L(z, \lambda)$ Vertical profile of the diffuse attenuation coefficient for the upwelling radiance spectrum. $K'_L(z, \lambda)$ $K_L(z, \lambda)$ determined by least squares regression over a depth interval. \bar{K}_n K at node depth z_n determined, with its vertical derivative by least-squares fit to radiometric profiles. $K_s(z, \lambda')$ Apparent attenuation coefficient measured in a homogeneous water column. $K_u(z, \lambda)$ Vertical attenuation coefficient for upwelled irradiance. $K'_u(z, \lambda)$ $K_u(z, \lambda)$ determined by least squares regression over a depth interval. $K_w(\lambda)$ Attenuation coefficient for pure seawater.

— L —

- l Cuvette pathlength.
- l_s Nominal absorption pathlength.
- L Radiance of light transmitted through absorbing oxygen.
- $L(0,0)$ Spectral radiance measured at the point closest to the center of a sphere.
- $L(411.5)$ Spectral radiance at 411.5 nm.
- $L(532)$ Spectral radiance at 532 nm.
- $L(z, \theta, \phi)$ Submerged upwelled radiance
- $L(\lambda)$ Spectral radiance.
- $L(\lambda_m)$ The radiance of a calibration sphere at the nominal peak wavelength of a filter. distribution.
- $L(\lambda, \theta, \phi)$ Atmospheric path radiance at flight altitude.
- L_0 The radiance of the atmosphere.
- $L_1(\lambda)$ Apparent radiance response to a linearly polarized source.
- $L_2(\lambda)$ Orthogonal apparent radiance response to a linearly polarized source.
- L_a Atmospheric path radiance due to aerosols.
- L_{atm} Radiance of light reflected from the atmosphere.
- $L_c(\lambda)$ Cloud radiance threshold.
- L_{cal} Calibration source radiance.
- L_{cloud} The maximum radiance from reflected light off of clouds.
- L_d A matrix of the four Stokes parameters for radiance incident on the surface.
- $L_g(\lambda)$ Sun glint radiance.
- L_i Incident light, or the length of the i th element (depending on usage).
- $L_i(\lambda)$ Spectral radiance for run number i , or radiance, where i may represent any of the following: m for measured; LU for look-up table; 0 for light scattered by the atmosphere; sfc for reflection from the sea surface; and w for water-leaving radiance.
- $L_{i,j}$ The ratio of normalized water-leaving radiances at wavelengths i (λ_i) to j (λ_j): $L_{WN}(\lambda_i)/L_{WN}(\lambda_j)$.
- L_{LU} The radiance calculated for the look-up tables.
- L_m The radiance of the ocean-atmosphere system measured at a satellite.
- L_M The radiance of the moon.
- L_{max} Maximum saturation radiance.
- L_{nadir} Measured radiance at nadir.
- $L_{NER}(\lambda)$ Noise equivalent radiance.
- $L_r(\lambda)$ Atmospheric path radiance due to Rayleigh scattering.
- $L_{r0}(\lambda)$ Rayleigh radiance at standard atmospheric pressure, P_0 .
- $L_s(\lambda)$ Subsurface water radiance.
- L_{sa} $L_0 + L_{sfc}$.
- $L_{sat}(\lambda)$ Saturation radiance for the sensor.
- L_{scan} Measured radiance at any pixel in a scan.
- L_{sfc} The radiance of the light reflected from the sea surface.
- L_{sfc} The columnar matrix of the four Stokes parameters ($L_{u,1}, L_{u,2}, L_{u,3}, L_{u,4}$).
- $L_{sky}(\lambda)$ Spectral sky radiance distribution.
- $L_t(\lambda)$ Total radiance at the top of the atmosphere (where a satellite sensor is located).
- L_{toa} Radiance emerging at the top of the atmosphere.
- $L_{typical}$ Expected radiance from the ocean measured on orbit.
- $L_u(z, \lambda)$ Upwelling spectral radiance profile.

- $L_u(0^-, \lambda)$ Upwelling spectral radiance just beneath the sea surface.
- $\hat{L}_u(\lambda)$ True upwelled spectral radiance.
- $\bar{L}_u(\lambda)$ Measured upwelled spectral radiance.
- L_{up} The columnar matrix of light leaving the surface containing the values $L_{up,1}, L_{up,2}, L_{up,3}$, and $L_{up,4}$.
- $L_{up,i}$ The RADTRAN radiance parameters (for $i = 1, 4$).
- \bar{L}_w The scalar value of the water-leaving radiance multiplied by a columnar matrix of the four Stokes parameters.
- L_w The water-leaving radiance of light scattered from beneath the surface and penetrating it.
- $L_w(443)$ Water-leaving radiance at 443 nm.
- $L_w(520)$ Water-leaving radiance at 520 nm.
- $L_w(550)$ Water-leaving radiance at 550 nm.
- $L_w(670)$ Water-leaving radiance at 670 nm.
- L'_{WN} Normalized water-leaving radiance at the Raman excitation wavelength.
- $L_{WN}(\lambda)$ Normalized water-leaving radiance.
- L_{S1} Measured radiance for mirror side 1.
- L_{S2} Measured radiance for mirror side 2.

— M —

- m Index of refraction, or an air mass (depending on usage).
- M Path length through the atmosphere, or the total number of discrete data points in a vertical radiometric profile (depending on usage).
- M'_m The corrected mean orbit anomaly of the Earth, which is a function of date, and refers to an imaginary moon in a circular orbit.
- M_{oz} Path length for ozone transmittance.

— N —

- n The index of refraction, the mean orbital motion in revolutions per day, the gain setting, or the starting index in a measurement for angular measurements, or node index for the integral K analysis (depending on usage).
- $n(\lambda)$ An exponent conceptually similar to the Ångström exponent.
- $n_g(\lambda)$ Index of refraction of Plexiglas™.
- $n_w(\lambda)$ Index of refraction of water.
- N The total number of something, or the ending index in a measurement sequence for angular measurements, or total number density (depending on usage).
- N_D The compensation factor for a 4 log neutral density filter.
- N_i Total number density of either the first or second aerosol model when $i = 1$ or 2, respectively.

— O —

- $\vec{O} \cdot \vec{P} \times \vec{V}$.
- O_{20} OFFI casts 20 m from the ship's stern.
- $OD_b(\lambda)$ Baseline optical density spectrum.
- $OD_g(\lambda)$ Optical density of soluble material (Gelbstoff).
- $OD_p(\lambda)$ Optical density spectra of filtered particles.
- $OD_r(\lambda)$ Optical density reference for filtered or distilled water.
- $OD_t(\lambda)$ Optical density of non-pigmented particulates (trip-ton).

- P -

p	Surface pressure.
p_a	A factor to account for the probability of scattering to the spacecraft for three different paths from the sun.
$p_a/(4\pi)$	Aerosol albedo of the scattering phase function.
p_{CO_2}	The partial pressure of CO_2 .
p_{dev}	Pressure deviation between the minimum and maximum surface pressures compared to 1,013 mb.
p_{ref}	Reference pressure.
p_w	The probability of seeing sun glitter in the direction θ, Φ given the sun in position θ_0, Φ_0 as a function of wind speed (W).
P	Nodal period, phaeopigment concentration, local surface pressure, or the particulate concentration including detrital material (depending on usage).
\vec{P}	Orbit position vector.
$P(\theta^+)$	Phase function for forward scattering.
$P(\theta^-)$	Phase function for backward scattering.
$P(\lambda)$	Polarization sensitivity.
P_0	Standard atmospheric pressure (1,013.25 mb).
P_a	Probability of scattering to the spacecraft.
P_{edge}	A pixel located on the exact edge of a bright source in a GAC scene.
P_i	PR714 raw radiance, the fitting coefficient for $i = 1-5$, or the i th pixel under correction (depending on usage).
P_S	Simulated $C_a + C_P$ (q.v.).
P_{slit}	Designates the number of pixels after the slit for the instrument to return to the residual counts allowed in the specification.
P_W	Probability of seeing sun glint in the spacecraft direction.
P_xl	Pixel number, i.e., the numerical designation of a pixel in a scan line.
P_{zero}	Designates the number of pixels required for the instrument to settle to a level of zero residual counts.
PB_{max}	Maximum biomass-specific photosynthetic rate.
PF	Polarization factor.
P_Δ	The location of the pixel to be corrected in GAC pixels relative to the (bright target) edge pixel.
P_σ	Phaeopigment concentration.

- Q -

q	Water transmittance factor.
Q	The ratio of upwelling irradiance to radiance, which varies with the angular distribution of the upwelling light field, and is π for an isotropic distribution.
$Q(\lambda)$	$L_u(0^-, \lambda)$ to $E_u(0^-, \lambda)$ relation factor (equal to π for a Lambertian surface).

- R -

r	Water-air reflectance for totally diffuse irradiance, the radius coordinate, the Earth-sun distance, or the lamp-to-plaque distance in centimeters (depending on usage).
r_1	The radius of circle one, or source aperture (depending on usage).
r_2	The radius of circle two, or detector aperture (depending on usage).
r_i	The geometric mean radii of either the first or second aerosol model when $i = 1$ or 2, respectively.

R	Reflectance, or the linear correlation coefficient (depending on usage).
\mathbb{R}	The reflection matrix.
\bar{R}	Mean Earth-sun distance.
R^2	The square of the linear correlation coefficient.
$R(0^-, \lambda)$	Irradiance reflectance just below the sea surface.
$R(\lambda)$	The irradiance reflectance at a particular wavelength.
R_1	A multiplier for mirror side 1.
R_2	A multiplier for mirror side 2.
R_a	Aerosol reflectance.
\dot{R}_a	$R_a/(qT_{2r})$.
R_B	Bidirectional reflectance distribution function.
R_e	Mean Earth radius (6,378.137 km).
R_E	Effective resistance for the thermistor-resistor pair.
R_i	Radiance of the i th pixel.
R'_L	Reflectance from an uncalibrated radiometer.
$R_L(z, \lambda)$	Spectral reflectance.
R_{lim}	Limiting reflectance for defining Case-1 water.
R_r	Rayleigh reflectance.
R_{rs}	Remote sensing reflectance.
$R_{rs}(z, \lambda)$	Spectral remote sensing reflectance profile.
R_s	Subsurface reflectance.
R_t	Total reflectance at the sensor.
\dot{R}_t	$(R_t - R_r)/(qT_{2r})$.
R_T	Resistance of the thermistor.
R_z	Sunspot number.

- S -

s	The reflectance of the atmosphere for isotropic radiance incident at its base.
$s(\lambda)$	The slope for the range 0-1,023.
s_{xy}	Residual standard deviation.
S	The solar constant, or the slope of a line (depending on usage).
$S(\lambda)$	The solar spectral irradiance, or $L_a(\lambda)/L_a(670)$ (depending on usage).
$S(\lambda_r)$	A coefficient of water temperature variation in $a_w(\lambda, T)$.
$S_G(\lambda)$	Radiometer signal (uncalibrated) measured viewing a reflectance plaque.
S_i	Initial detector signal.
S_n	Detector signal with gain.
S_{sky}	Radiometer signal (uncalibrated) measured viewing the sky.
$S_w(\lambda)$	Radiometer signal (uncalibrated) measured viewing the water.

- T -

t	Time variable, or the transmission of L_{sfc} through the atmosphere (depending on usage).
t'	The transmission of L_w through the atmosphere.
$t(k)$	Spectral transmission as a function of wavenumber.
$t(\lambda)$	Diffuse transmittance of the atmosphere.
$t(750, \theta)$	Diffuse transmittance between the ocean surface and the sensor at 750 nm.
t_0	Initial time, or the sum of the direct and diffuse transmission of sunlight through the atmosphere (depending on usage).
t_1	First observation time.
t_2	Second observation time.
t_a	Aerosol transmittance after absorption.
t_{as}	Aerosol transmittance after scattering.

t_d	Direct component of transmittance after absorption by the gaseous components of the atmosphere, scattering and absorption by aerosols, and scattering by Rayleigh.
$t_d(z, \lambda)$	Downward spectral irradiance transmittance from flight altitude z to the surface.
t_e	Time difference in hours between present position and most recent equator crossing.
t_{EC}	Equator crossing time.
t_{Oz}	Transmittance after absorption by ozone.
t_r	Transmittance after Rayleigh scattering.
t_s	Diffuse component of transmittance after absorption by the gaseous components of the atmosphere, scattering and absorption by aerosols, and scattering by Rayleigh.
t_{vv}	Transmittance after absorption by water vapor.
T	Tilt position.
T'	Instrument temperature during calibration.
$T(\lambda)$	The transmittance along the slant path to the sun.
$T(\lambda, \theta)$	Total transmittance (direct plus diffuse) from the ocean through the atmosphere to the spacecraft along the path determined by the spacecraft zenith angle θ .
$T(\lambda, \theta, \theta_0)$	Two-way transmission through oxygen in the model layer in terms of zenith angle (θ), and solar angle (θ_0).
$T_0(\lambda, \theta_0)$	Total downward transmittance of irradiance.
T_{2r}	Two-way diffuse transmittance for Rayleigh attenuation.
T_e	Equation of time.
$T_g(\lambda)$	Transmittance through a glass window.
T_{ox}	Transmittance of oxygen (O_2).
T_{oz}	Transmittance of ozone (O_3).
$T_s(\lambda)$	Transmittance through the surface.
$T_w(\lambda)$	Transmittance through a water path.
T_{vv}	Transmittance of water vapor (H_2O).
– U, V –	
V	Volume of water filtered.
\vec{V}	Orbit velocity vector.
\hat{V}	True voltage.
\tilde{V}	Measured voltage.
$V(z)$	Transmissometer voltage.
$V(\theta)$	Normalized measured value for a cosine collector.
$\bar{V}(\theta_i)$	Mean normalized measured value of instrument response.
V_{air}	Factory transmissometer air calibration voltage.
V'_{air}	Current transmissometer air calibration voltage.
V_{dark}	Transmissometer dark response.
$V_i(t_j)$	The i th spatial location at observation time t_j .
V_M	The radiance detector voltage while viewing the moon.
V_S	The irradiance detector voltage while viewing the sun.
V_T	Focal plane temperature sensor voltage output.
– W –	
w_m	The weighting coefficient at each depth z_m .
W	Wind speed, or equivalent bandwidth (depending on usage).
W_d	Direct irradiance divided by the total irradiance at the surface.
W_s	Diffuse irradiance divided by the total irradiance.
W_θ	Weighting function.
– X –	
x	The abscissa or longitudinal coordinate, or the pixel number within a scan line (depending on usage).
X	ECEF x component of orbit position, or depth in meters (depending on usage).
\dot{X}	ECEF X component of orbit velocity.
– Y –	
y	The ordinate, meridional coordinate, or an empirical factor (depending on usage).
Y	ECEF y component of orbit position; or the base 10 logarithm of the radiometric measurement E_d , E_u , or L_u (depending on usage).
\dot{Y}	ECEF Y component of orbit velocity.
– Z –	
z	The vertical coordinate (frequently water depth).
z'	Corrected depth for pressure transducer depth offset relative to a sensor.
z_i	The depth of a particular node.
z_m	Centered depth, or the depth of the m th data point in a vertical radiometric profile (depending on usage).
z_n	The node depth number ($n = 0, \dots, N - 1$).
z_r	Shallow depth.
z_s	Exclusion depth due to data contamination.
Z	ECEF z component of orbit position.
\dot{Z}	ECEF Z component of orbit velocity.
– GREEK –	
α	Percent albedo, tilt angle, formulation coefficient (intercept), the power constant in the Ångström formulation, the exponential value in the expression relating the extinction coefficient to wavelength, or the off-axis angle (depending on usage).
α'	A power law constant.
α_0	A curve fitting constant.
α_1	A curve fitting constant.
α_2	A curve fitting constant.
α_{750}	Albedo at 750 nm.
β	A formulation coefficient (slope) or a constant in the Ångström formulation (depending on usage).
$\beta(z, \lambda, \theta)$	Spectral volume scattering function.
$\tilde{\beta}(\theta)$	The normalized scattering phase function ($\beta(\theta)/b$).
β_b	The measured integral of the volume scattering function in the backward direction.
β_i	The extinction coefficient of either the first or second aerosol model when $i = 1$ or 2, respectively; or the filter absorption correction factor for scattering within the filter.
γ	The Ångström exponent.
$\gamma(\lambda)$	The ratio of the aerosol optical thickness at wavelength λ to the aerosol optical thickness at 670 nm.
$\gamma_{ij}(\xi)$	Hermitian cubic polynomial.
δ	The great circle distance from $\Psi_s(t_0)$ to $\Psi_s(t - t_0)$, the departure of each individual conversion factor from the mean, a relative difference, the absorption coefficient, or the cosine response asymmetry (depending on usage).

Δk	Equivalent bandwidth.	κ	An integration constant: $\kappa = A_d \pi r_1^2 (r_1^2 + r_2^2 + d^2)^{-1}$.
ΔL	The difference between L and L_0 .	κ'	Self-shading coefficients.
$\Delta L_w(670)$	The error in the water-leaving radiance for the red channel.	λ	Wavelength of light.
Δp	The difference in atmospheric pressure.	λ'	A channel of nominal wavelength, or the Raman excitation wavelength (depending on usage).
Δp_{CO_2}	The difference in the partial pressure of CO_2 in the air and in the sea.	λ_0	Center wavelength.
ΔP	The difference in successive pixels, or the pressure deviation from standard pressure, P_0 (depending on usage).	λ_1	Starting wavelength.
Δt	Time difference.	λ_2	Ending wavelength.
$\Delta T(\lambda)$	The error in transmittance.	λ_j	A wavelength of light at a particular band.
Δz	Half-interval depth increment.	λ_m	Nominal center wavelength.
$\Delta\theta$	Angular increment.	λ_n	Any nominal wavelength.
$\Delta\theta_s$	The error (in radians) in the knowledge of θ_s .	λ_r	Near-IR wavelength.
$\Delta\lambda$	An interval in wavelength.	μ	Mean value, or cosine of the satellite zenith angle (depending on usage).
$\Delta\rho_w(\lambda)$	The error in the water-leaving reflectance for the red channel.	μ_0	Cosine of the solar zenith angle.
$\Delta\sigma(\lambda)$	The absolute error in spectral optical depth.	$\bar{\mu}_d(z, \lambda)$	Spectral mean cosine for downwelling radiance at depth z .
$\Delta\tau_a$	The error in the aerosol optical thickness.	$\bar{\mu}_d(0^+, \lambda)$	Spectral mean cosine for downwelling radiance at the sea surface.
$\Delta\Phi_{max}$	The ratio F_v/F_m which corresponds to the (normalized) maximum number of reaction centers in the chlorophyll population which are capable of photosynthesis.	μ_s	The reciprocal of the effective optical length to the top of the atmosphere, along the line of sight to the sun.
$\Delta\omega$	The longitude difference from the sub-satellite point to the pixel.	ν_j	The j th temporal weighting factor.
$\Delta\omega_s$	Longitude difference.	ξ	A local depth coordinate ranging from -1 at node z_{i-1} to $+1$ at node z_i , or actual deployment distance (depending on usage).
ϵ	Cosine collector response error or an atmospheric correction parameter (depending on usage).	$\xi(\lambda)$	Minimum ship-shadow avoidance distance.
$\epsilon(i, j)$	The ratio of L_a in two bands i and j .	ξ_d	The calculated deployment distance for downwelling irradiance measurements.
ϵ_{sky}	Self-shading error for E_{sky} .	ξ_{EM}	The distance between the Earth and the moon.
ϵ_{sun}	Self-shading error for E_{sun} .	ξ_L	The calculated deployment distance for upwelling radiance measurements.
$\varepsilon(\lambda)$	$1 - e^{-k' a(\lambda) r}$	ξ_u	The calculated deployment distance for upwelling irradiance measurements.
η	The bearing from the sub-satellite point to the pixel along the direction of motion of the satellite.	ρ	The Fresnel reflectivity, the weighted direct plus diffuse reflectance, or the average reflectance of the sea (depending on usage).
θ	The spacecraft zenith angle, spacecraft pitch, the polar angle of the line-of-sight at a spacecraft, the centroid angle of the scattering measurement, or a generalized angle (depending on usage).	$\tilde{\rho}$	The Fresnel reflectance for sun and sky irradiance.
$\dot{\theta}$	Pitch rate.	$\rho(\theta)$	Fresnel reflectance for viewing geometry.
θ_0	Polar angle of the direct sunlight, or solar zenith angle (depending on usage).	$\rho(\theta_0)$	Fresnel reflectance for solar geometry.
θ_{0w}	Refracted solar zenith angle.	$\rho(\lambda)$	The bidirectional reflectance.
θ_1	The intersection angle of circle one or the lower integration limit (depending on usage).	$\rho_{c,i}$	Reflectance of clouds and ice.
θ_2	The intersection angle of circle two or the upper integration limit (depending on usage).	$\rho_g(\lambda)$	Gray card or plaque reflectance.
θ_a	In-air measurement angle.	ρ_i	The reflectance of the sea of either the first or second aerosol model when $i = 1$ or 2 , respectively.
θ_i	Any nominal angle.	$\rho_i(\lambda)$	The reflectance where i may represent any of the following: m for measured; LU for look-up table; o for light scattered by the atmosphere; sfc for reflection from the sea surface; or w for water-leaving radiance.
θ_n	The zenith angle of the vector normal to the surface vector for which glint will be observed or an angular origin (depending on usage).	ρ_n	Sea surface reflectance for direct irradiance at normal incidence for a flat sea.
θ_N	The angle with respect to nadir that the sea surface slopes to produce a reflection angle to the spacecraft or an angular terminus (depending on usage).	ρ_N	Reflectance for diffuse irradiance.
θ_s	Scan angle of sensor or the solar zenith angle (depending on usage).		
θ'_s	Scan angle of sensor adjusted for tilt.		
θ_t	Tilt angle.		
θ_w	In-water measurement angle.		

σ	One standard deviation of a set of data values.	τ_{wv}	The absorption optical thickness of water vapor.
σ^2	The mean square surface slope distribution.	$\tau_w v(\lambda)$	Water vapor optical thickness.
$\sigma(\lambda)$	The spectral optical depth.	ϕ	Azimuth angle of the line-of-sight at a spacecraft.
σ_i^2	$\sigma_i^2 = \langle (\log r - \log r_i)^2 \rangle$.	ϕ_0	Azimuth angle of the direct sunlight.
σ_t	The density of sea water determined from the <i>in situ</i> salinity and temperature, but at atmospheric pressure.	Φ	Spacecraft azimuth angle or roll (depending on usage).
σ_θ	The density of sea water determined from the <i>in situ</i> salinity and the potential temperature (θ), but at atmospheric pressure.	$\dot{\Phi}$	Roll rate.
\vec{r}	Vector of measured optical depths.	Φ_0	Solar azimuth angle.
$\tau(z, \lambda)$	Vertical profile of the spectral optical depth.	Φ_D	The detector solid angle.
$\hat{\tau}(z, \lambda)$	The estimated vertical profile of the spectral optical depth.	Φ_M	The solid angle subtended by the moon at the measuring instrument.
τ_a	Aerosol optical thickness.	χ	Proportionality constant.
$\tau_g(\lambda)$	Uniform mixed gas optical thickness.	Ψ	Pixel latitude or yaw (depending on usage).
$\tau_o(\lambda)$	Ozone optical thickness.	$\dot{\Psi}$	Yaw rate.
τ_{ox}	Oxygen optical thickness at 750 nm.	Ψ_d	Solar declination latitude.
$\tau_{\text{ox}}(\lambda)$	Optical thickness due to oxygen absorption.	$\Psi_s(t)$	Subsatellite latitude as a function of time.
τ_{o_z}	The optical thickness of ozone.	ω	Longitude variable, the surface reflection angle, or the single scattering albedo (depending on usage).
τ_r	Rayleigh optical thickness (due to scattering by the standard molecular atmosphere).	ω_0	Old longitude value.
τ'_r	Pressure corrected Rayleigh optical thickness.	ω_a	Single scattering albedo of the aerosol.
$\tau_R(\lambda)$	Rayleigh optical thickness.	ω_e	Equator crossing longitude.
τ_{r0}	Rayleigh optical thickness at standard atmospheric pressure, P_0 .	ω_i	Spatial weighting factor.
τ_{r_o}	Rayleigh optical thickness weighted by the SeaWiFS spectral response.	ω_s	Longitude variable.
$\tau_s(\lambda)$	Spectral solar atmospheric transmission.	Ω	Solar hour angle, or the amount of ozone in Dobson units (depending on usage).

THE SEAWIFS TECHNICAL REPORT SERIES

Vol. 1

Hooker, S.B., W.E. Esaias, G.C. Feldman, W.W. Gregg, and C.R. McClain, 1992: An Overview of SeaWiFS and Ocean Color. *NASA Tech. Memo. 104566, Vol. 1*, S.B. Hooker and E.R. Firestone, Eds., NASA Goddard Space Flight Center, Greenbelt, Maryland, 24 pp., plus color plates.

Vol. 2

Gregg, W.W., 1992: Analysis of Orbit Selection for SeaWiFS: Ascending vs. Descending Node. *NASA Tech. Memo. 104566, Vol. 2*, S.B. Hooker and E.R. Firestone, Eds., NASA Goddard Space Flight Center, Greenbelt, Maryland, 16 pp.

Vol. 3

McClain, C.R., W.E. Esaias, W. Barnes, B. Guenther, D. Endres, S.B. Hooker, G. Mitchell, and R. Barnes, 1992: Calibration and Validation Plan for SeaWiFS. *NASA Tech. Memo. 104566, Vol. 3*, S.B. Hooker and E.R. Firestone, Eds., NASA Goddard Space Flight Center, Greenbelt, Maryland, 41 pp.

Vol. 4

McClain, C.R., E. Yeh, and G. Fu, 1992: An Analysis of GAC Sampling Algorithms: A Case Study. *NASA Tech. Memo. 104566, Vol. 4*, S.B. Hooker and E.R. Firestone, Eds., NASA Goddard Space Flight Center, Greenbelt, Maryland, 22 pp., plus color plates.

Vol. 5

Mueller, J.L., and R.W. Austin, 1992: Ocean Optics Protocols for SeaWiFS Validation. *NASA Tech. Memo. 104566, Vol. 5*, S.B. Hooker and E.R. Firestone, Eds., NASA Goddard Space Flight Center, Greenbelt, Maryland, 43 pp.

Vol. 6

Firestone, E.R., and S.B. Hooker, 1992: SeaWiFS Technical Report Series Cumulative Index: Volumes 1–5. *NASA Tech. Memo. 104566, Vol. 6*, S.B. Hooker and E.R. Firestone, Eds., NASA Goddard Space Flight Center, Greenbelt, Maryland, 9 pp.

Vol. 7

Darzi, M., 1992: Cloud Screening for Polar Orbiting Visible and IR Satellite Sensors. *NASA Tech. Memo. 104566, Vol. 7*, S.B. Hooker and E.R. Firestone, Eds., NASA Goddard Space Flight Center, Greenbelt, Maryland, 7 pp.

Vol. 8

Hooker, S.B., W.E. Esaias, and L.A. Rexrode, 1993: Proceedings of the First SeaWiFS Science Team Meeting. *NASA Tech. Memo. 104566, Vol. 8*, S.B. Hooker and E.R. Firestone, Eds., NASA Goddard Space Flight Center, Greenbelt, Maryland, 61 pp.

Vol. 9

Gregg, W.W., F.C. Chen, A.L. Mezaache, J.D. Chen, J.A. Whiting, 1993: The Simulated SeaWiFS Data Set, Version 1. *NASA Tech. Memo. 104566, Vol. 9*, S.B. Hooker, E.R. Firestone, and A.W. Indest, Eds., NASA Goddard Space Flight Center, Greenbelt, Maryland, 17 pp.

Vol. 10

Woodward, R.H., R.A. Barnes, C.R. McClain, W.E. Esaias, W.L. Barnes, and A.T. Mecherikunnel, 1993: Modeling of the SeaWiFS Solar and Lunar Observations. *NASA Tech. Memo. 104566, Vol. 10*, S.B. Hooker and E.R. Firestone, Eds., NASA Goddard Space Flight Center, Greenbelt, Maryland, 26 pp.

Vol. 11

Patt, F.S., C.M. Hoisington, W.W. Gregg, and P.L. Coronado, 1993: Analysis of Selected Orbit Propagation Models for the SeaWiFS Mission. *NASA Tech. Memo. 104566, Vol. 11*, S.B. Hooker, E.R. Firestone, and A.W. Indest, Eds., NASA Goddard Space Flight Center, Greenbelt, Maryland, 16 pp.

Vol. 12

Firestone, E.R., and S.B. Hooker, 1993: SeaWiFS Technical Report Series Cumulative Index: Volumes 1–11. *NASA Tech. Memo. 104566, Vol. 12*, S.B. Hooker and E.R. Firestone, Eds., NASA Goddard Space Flight Center, Greenbelt, Maryland, 28 pp.

Vol. 13

McClain, C.R., K.R. Arrigo, J. Comiso, R. Fraser, M. Darzi, J.K. Firestone, B. Schieber, E-n. Yeh, and C.W. Sullivan, 1994: Case Studies for SeaWiFS Calibration and Validation, Part 1. *NASA Tech. Memo. 104566, Vol. 13*, S.B. Hooker and E.R. Firestone, Eds., NASA Goddard Space Flight Center, Greenbelt, Maryland, 52 pp., plus color plates.

Vol. 14

Mueller, J.L., 1993: The First SeaWiFS Intercalibration Round-Robin Experiment, SIRREX-1, July 1992. *NASA Tech. Memo. 104566, Vol. 14*, S.B. Hooker and E.R. Firestone, Eds., NASA Goddard Space Flight Center, Greenbelt, Maryland, 60 pp.

Vol. 15

Gregg, W.W., F.S. Patt, and R.H. Woodward, 1994: The Simulated SeaWiFS Data Set, Version 2. *NASA Tech. Memo. 104566, Vol. 15*, S.B. Hooker and E.R. Firestone, Eds., NASA Goddard Space Flight Center, Greenbelt, Maryland, 42 pp., plus color plates.

Vol. 16

Mueller, J.L., B.C. Johnson, C.L. Cromer, J.W. Cooper, J.T. McLean, S.B. Hooker, and T.L. Westphal, 1994: The Second SeaWiFS Intercalibration Round-Robin Experiment, SIRREX-2, June 1993. *NASA Tech. Memo. 104566, Vol. 16*, S.B. Hooker and E.R. Firestone, Eds., NASA Goddard Space Flight Center, Greenbelt, Maryland, 121 pp.

Vol. 17

Abbott, M.R., O.B. Brown, H.R. Gordon, K.L. Carder, R.E. Evans, F.E. Muller-Karger, and W.E. Esaias, 1994: Ocean Color in the 21st Century: A Strategy for a 20-Year Time Series. *NASA Tech. Memo. 104566, Vol. 17*, S.B. Hooker and E.R. Firestone, Eds., NASA Goddard Space Flight Center, Greenbelt, Maryland, 20 pp.

Vol. 18

Firestone, E.R., and S.B. Hooker, 1995: SeaWiFS Technical Report Series Cumulative Index: Volumes 1–17. *NASA Tech. Memo. 104566, Vol. 18*, S.B. Hooker and E.R. Firestone, Eds., NASA Goddard Space Flight Center, Greenbelt, Maryland, 47 pp.

Vol. 19

McClain, C.R., R.S. Fraser, J.T. McLean, M. Darzi, J.K. Firestone, F.S. Patt, B.D. Schieber, R.H. Woodward, E-n. Yeh, S. Mattoo, S.F. Biggar, P.N. Slater, K.J. Thome, A.W. Holmes, R.A. Barnes, and K.J. Voss, 1994: Case Studies for SeaWiFS Calibration and Validation, Part 2. *NASA Tech. Memo. 104566, Vol. 19*, S.B. Hooker, E.R. Firestone, and J.G. Form Approved
OMB No. 0704-0188

Public reporting burden for this collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington, VA 22202-4302, and to the Office of Management and Budget, Paperwork Reduction Project (0704-0188), Washington, DC 20503.

1. AGENCY USE ONLY (Leave blank)			2. REPORT DATE December 1996		3. REPORT TYPE AND DATES COVERED Technical Memorandum	
4. TITLE AND SUBTITLE SeaWiFS Technical Report Series Volume 36—SeaWiFS Technical Report Series Cumulative Index: Volumes 1–35			5. FUNDING NUMBERS Code 970.2			
6. AUTHOR(S) Elaine R. Firestone and Stanford B. Hooker Series Editors: Stanford B. Hooker and Elaine R. Firestone			8. PERFORMING ORGANIZATION REPORT NUMBER 97B00018			
7. PERFORMING ORGANIZATION NAME(S) AND ADDRESS(ES) Laboratory for Hydropheric Processes Goddard Space Flight Center Greenbelt, Maryland 20771			10. SPONSORING/MONITORING AGENCY REPORT NUMBER TM-104566, Vol. 36			
9. SPONSORING/MONITORING AGENCY NAME(S) AND ADDRESS(ES) National Aeronautics and Space Administration Washington, D.C. 20546-0001

13. ABSTRACT (Maximum 200 words) The Sea-viewing Wide Field-of-view Sensor (SeaWiFS) is the follow-on ocean color instrument to the Coastal Zone Color Scanner (CZCS), which ceased operations in 1986, after an eight-year mission. SeaWiFS is expected to be launched in 1997, on the SeaStar satellite, being built by Orbital Sciences Corporation (OSC). The SeaWiFS Project at the National Aeronautics and Space Administration (NASA) Goddard Space Flight Center (GSFC), has undertaken the responsibility of documenting all aspects of this mission, which is critical to the ocean color and marine science communities. This documentation, entitled the <i>SeaWiFS Technical Report Series</i> , is in the form of NASA Technical Memorandum Number 104566. All reports published are volumes within the series. This particular volume serves as a reference, or guidebook, to the previous 35 volumes and consists of 6 sections including: an addenda, an errata, an index to key words and phrases, lists of acronyms and symbols used, and a list of all references cited. The editors publish a cumulative index of this type after every five volumes. Each index covers the reference topics published in all previous editions, that is, each new index includes all of the information contained in the preceding indices with the exception of any addenda.						
14. SUBJECT TERMS SeaWiFS, Oceanography, Cumulative, Index, Summary, Overview, Errata, Addendum, Glossary, Symbols, References, Bio-optical, Algorithm Workshop, Protocols Subgroup Workshop			15. NUMBER OF PAGES 55		16. PRICE CODE	
17. SECURITY CLASSIFICATION OF REPORT Unclassified			18. SECURITY CLASSIFICATION OF THIS PAGE Unclassified		19. SECURITY CLASSIFICATION OF ABSTRACT Unclassified	
20. LIMITATION OF ABSTRACT Unlimited
