## MODIS First Image

First image of the United States east coast sensed by MODIS on February 7, 2000. Bands 1 (670nm), 4 (555nm) and 3 (443nm) of the 36 MODIS bands are displayed as red, green and blue respectively to produce this true-color image of the top-of-the-atmosphere reflectance. This image corresponds to one individual granule or five minutes of acquisition. The granule dimensions are approximately 2000km by 2300km. The inset shows the Washington D.C. and Chesapeake Bay area.
