

OCEANS SUMMARY--3 October, 1991

MODIS-N SPECIFICATIONS

1. Spectral Band Registration

- Oceans need 0.1 of 1 km pixel co-registration between VIR and NIR bands
- 0.2 of 1 km pixel co-registration between VIS/NIR and SWIR/LWIR is o.k.

2. SST accuracy

- SST Gurus absent, but...
please keep trying to match ATSR BB performance

3. SST projected accuracies of ~.6 for longer bands is a step in the right direction

4. VIS band changes

move band 12 to 555 - SeaWiFS
move band 13 to either:

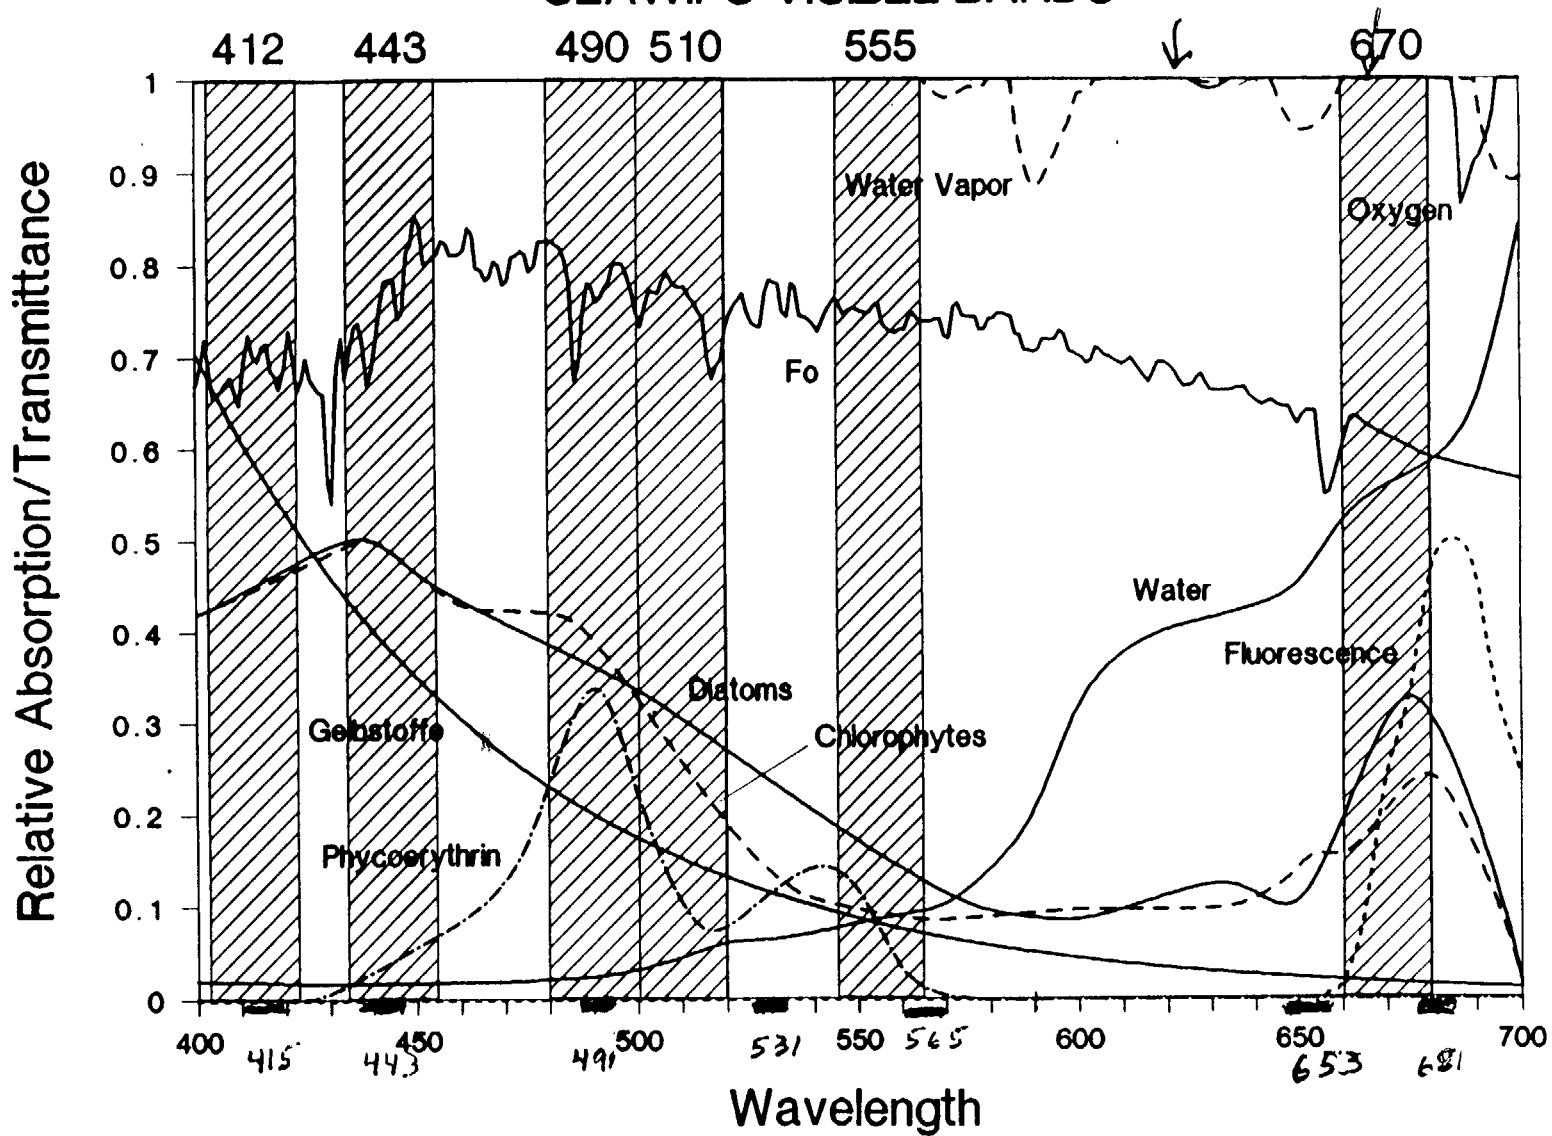

620 mm

resultant SNR is sufficient

667 mm

- Abbott, Gordon to reconcile and make recommendation in <2 months (1 Dec.)
- SBRC to look at dichroic position

SEAWIFS VISIBLE BANDS

SeaWiFS MODIS INTERACTIONS

1. SeaWiFS launch in 23 months
2. SeaWiFS algorithm development/cal-val depends on MODIS Oceans Group support at guideline levels, and additional funds from SeaWiFS
3. MODIS Ocean Group members are directed to focus on SeaWiFS
4. MOU (SeaWiFS/EOS) needed on DAAC archive and distribution of SeaWiFS data products
5. Need to clarify schedule of deliverables for certain MODIS Ocean Group members:
 - contracts
 - review
6. Demands on people's time in answering to 2 projects is a major concern
 - possible liason function
 - joint reviews of algorithms and progress thru '94
7. Out year '95, '96...efforts will coverage

REQUIRED CAPABILITIES FOR OCEAN COLOR

1. Continued data from a tilting sensor

Coverage of the Southern Ocean at adequate temporal frequency

Revisit times in tropics and mid lat. summers

2. Additional spectral information

SeaWiFS corrects ambiguities in pigment, scattering, colored dissolved organic material

Does not provide information on population composition, phycoerythrin, accessory pigments, fluorescences, reduction of errors

Spectral information is needed for primary production models and process studies

3. Need to evolve improved calibration, characterization and product assurance over SeaWiFS

4. Adequate in-situ cal/val program

5. Primary Productivity models/coupled upper mixing layer models

REQUIREMENTS UNDER
IPCC/WATSON #2 FOR MODIS T
(budgets, processes)

1. Ocean head flux, budgets
2. Dissolved organic material cycle
3. Primary production/carbon cycling
4. Di-methyl sulfide (and other trace gases)

RECOMMENDATIONS

Orbits

- T - Noon is best but ≤ 1.5 hr off is ok
- N - off-noon is best
- AM descending, PM ascending preferred

Sensors

MODIS-N

- Excellent SNR, calibration, fluorescence @ 1 km, SST
- Less than optimal global (southern ocean) sampling
- Limited spectral capabilities

MODIS-T

- Excellent SNR, calibration
- Optimal global sampling
- Full spectral coverage
- Development (phase C/D) is moving along
- Meets required specifications for oceans studies
- The superior ocean color instrument

Loss table

Ocean Data Losses for various conditions

Sensor-Orbit	Glint	Dark	Tilt	Zen. A. > 48	Total Lost
N - 1:30 A	17	21	0	23	61
N-10:30 D	14	25	0	24	63
N+N cross	12	21	0	24	57
T - 1:30 A	4	25	3	11	43
T+N 1:30 A	12	22	1	19	54
T, Noon	4	24	3	11	42

No clouds, gridded winds, equinox, 50% duty cycle
 Dark is when $tLw < 25$ NEdL at 443 nm (ca. 2.5 CZCS counts)
 Glint is when $Lg > 5$ W/m²usr at 500 nm (.5 mW/cm²....)

MERIS 1997 launch?

Incomplete, inconsistent specs

Lacks tilt

Poor sampling 1030 crossing - poor southern ocean

Limited spectral bands (~10 for oceans)

SeaWiFS - level SNR

Operational concerns

US interactions

Data availability

Won't suffice

OCTS 1995 launch?

CZCS - level SNR

SeaWiFS bands and thermal IR

No global coverage

Data access concern

GLI launch 2001/3 (Japan)

Undefined

MISR

CZCS - like on limited swath, 4 bands

Can't substitute for T or N

Provides useful additional information

MERIS SPECTRAL BANDS

1 October, 1991

B.Nr.	[center]	L_{max} [Wm ⁻² sr ⁻¹ μm ⁻¹]	Width	Application	Gr. Refl. [%]	Rad. Res.	Spatial Resolution	Input from

O = Ocean
V = Vegetation
A = Atmosphere
TOA = At the Top of the
Atmosphere

Assume:

Continuation of SeaWiFS data stream

Make data access consistent. Need EOS - level cal/val program and sensor buy now to keep costs down.

Fly:

- 1 MODIS-N on 1st platform 10:30 des.
- 2 MODIS-T on 2nd platform 1:30 asc.
with or without N
- 3 Don't deselect "T" until options are studied, approved
 - critical to long term needs
 - meets specs
 - low risk
 - development is in phase C/D and moving ahead
- 4 2 MODIS N's plus alternate platform for MODIS T
 - option: T/GLI on ADEOS II
 - option: T on Earth Probe, free flyer
- 5 Scatterometer for winds
