

SCAR-B  
**Smoke Cloud And Radiation - Brazil**

AUG. 15 - SEPT. 14, 1995

E L E M E N T S

**ER-2:**

MAS, AVIRIS  
imaging  
spectrometers,  
lidar

**C131:**

in situ aerosol,  
trace gas, CCN  
and cloud  
measurements,  
aerosol optical  
properties,  
radiation, lidar

**INPE**

**Bandierante** -  
aerosol in situ,  
aerosol optical  
properties,  
radiation

**US Forest service**

monitored  
emission from  
individual fires

**U-Arizona,**

surface vegetation  
properties, remote  
sensing through  
smoke

**AERONET**

network of  
sun/sky  
radiometers,  
aerosol optical  
thickness and  
size distribution

**U-Wisconsin**

GOES imagery  
and NMC  
trajectory analysis

**U-Sao Paulo**

aerosol sampling,  
operations

**U-Alaska**

aerosol size  
distribution and  
CCN spectra

## **6. Smoke <--interaction--> clouds**

Cloud properties, deviation from plane parallel, effects of clouds on smoke, effect of smoke on cloud drop size and reflectance: MAS, AVIRIS, AVHRR.

## **7. Remote sensing**

Remote sensing of aerosol, water vapor, clouds  
Remote sensing of vegetation through smoke  
Atmospheric corrections

## Planned analysis:

### **1. Fires:**

Statistics of thousands of fires (thermal signature, thermal energy smoldering/flaming) MAS, AVIRIS, ground views

### **2. Smoke emission from fires:**

MAS and AVIRIS remote sensing, relation to fire property  
In situ emissions from specific fires

### **3. Smoke properties:**

Size distribution (function of the smoke age), chemistry, CCN spectrum

### **4. Smoke life time, transport, evolution**

Models + specific measurements + GOES and AVHRR and validate against MAS and C131 and Bandierante in situ measurements.

### **5. Smoke-radiation-fluxes-forcing**

smoke size distribution

--> optical in situ properties

--> radiance

--> fluxes

**SCAR-B**

## **Smoke Cloud And Radiation - Brazil**

- **All elements of the mission worked**
- **Excellent collaborations between the US investigators, the Brazilian scientists and air force observers**
- **One of the smokiest years (ER-2 flew thousands of kms not seeing the ground)**
- **MAS data from 70 ER-2 hrs x 700 km x 40 km x 50 channels, 15 hrs of AVIRIS data**

### **General goal:**

**Characterization of the effect of biomass burning on the atmosphere**
