

Interrogating MODIS & AIRS data using HYDRA

Paul Menzel
NOAA Satellite and Information Services

What is HYDRA?
What can it do?
Some examples
How to get it?

HYperspectral viewer for Development of Research Applications - HYDRA

MSG,
GOES

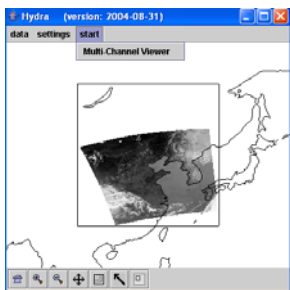

MODIS,
AIRS, CALIPSO

Freely available software
For researchers and educators
Computer platform independent
Extendable to more sensors and applications
Based in VisAD
(Visualization for Algorithm Development)
Uses Jython (Java implementation of Python)
runs on most machines
512MB main memory & 32MB graphics card suggested
on-going development effort

Developed at CIMSS by
Tom Rink
Tom Whittaker
Kevin Baggett

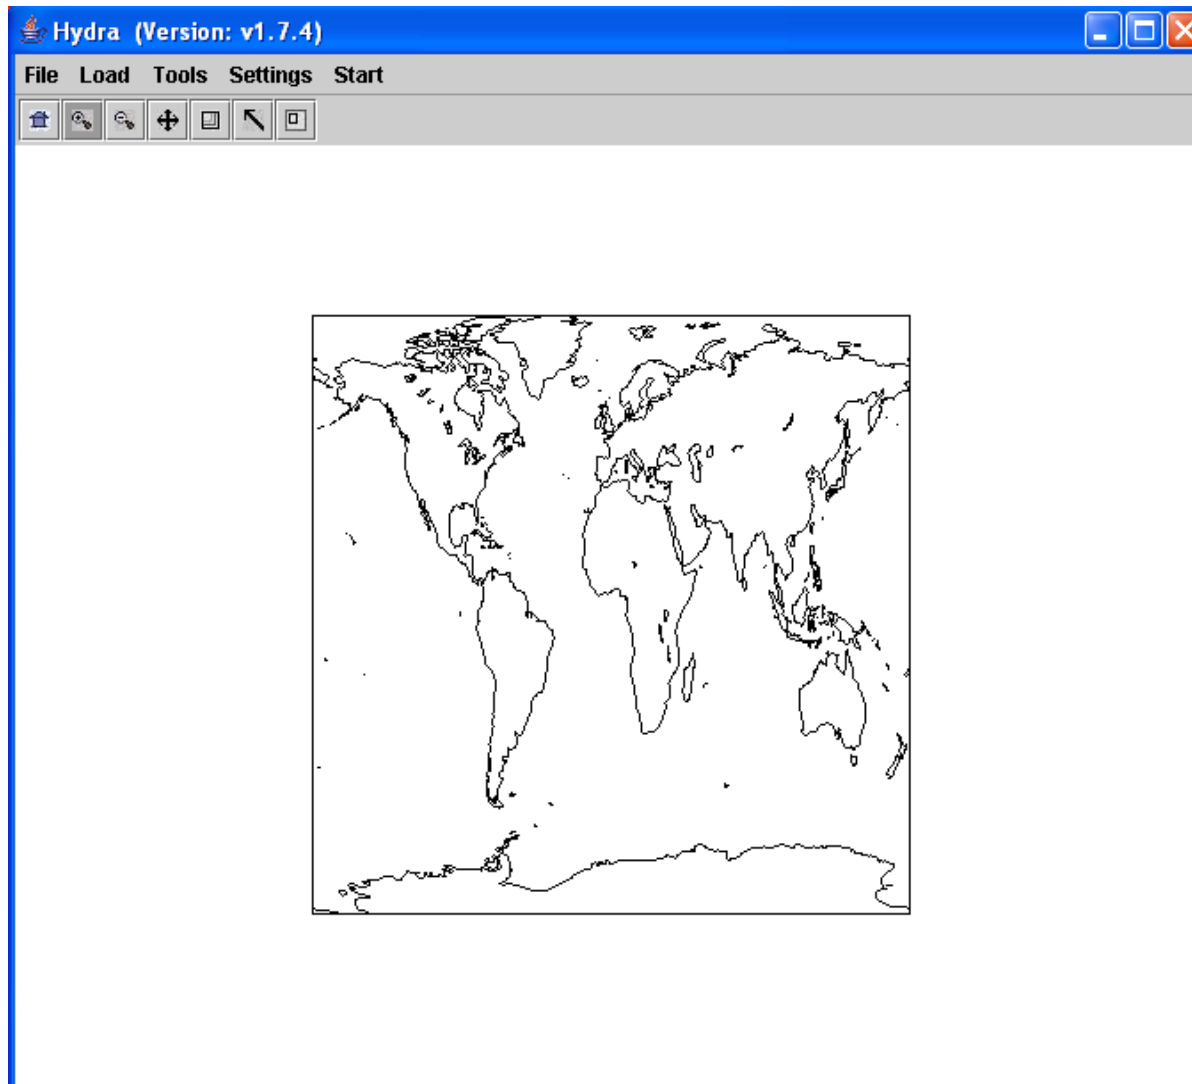

With guidance from
Paolo Antonelli
Liam Gumley
Paul Menzel

resolution

Multichannel Viewer

Under Tools

Linear Combinations opens *Channel Combination Tool* display where you can specify linear combinations of spectral bands a,b,c and d ($a +x/ b) +x/ (c +x/ d)$).

RGB allows you to select a spectral channel for each color in the RGB display

Transect allows you to create a line on the image and see the temperatures or radiances along the transect marked by shift plus right click and drag.

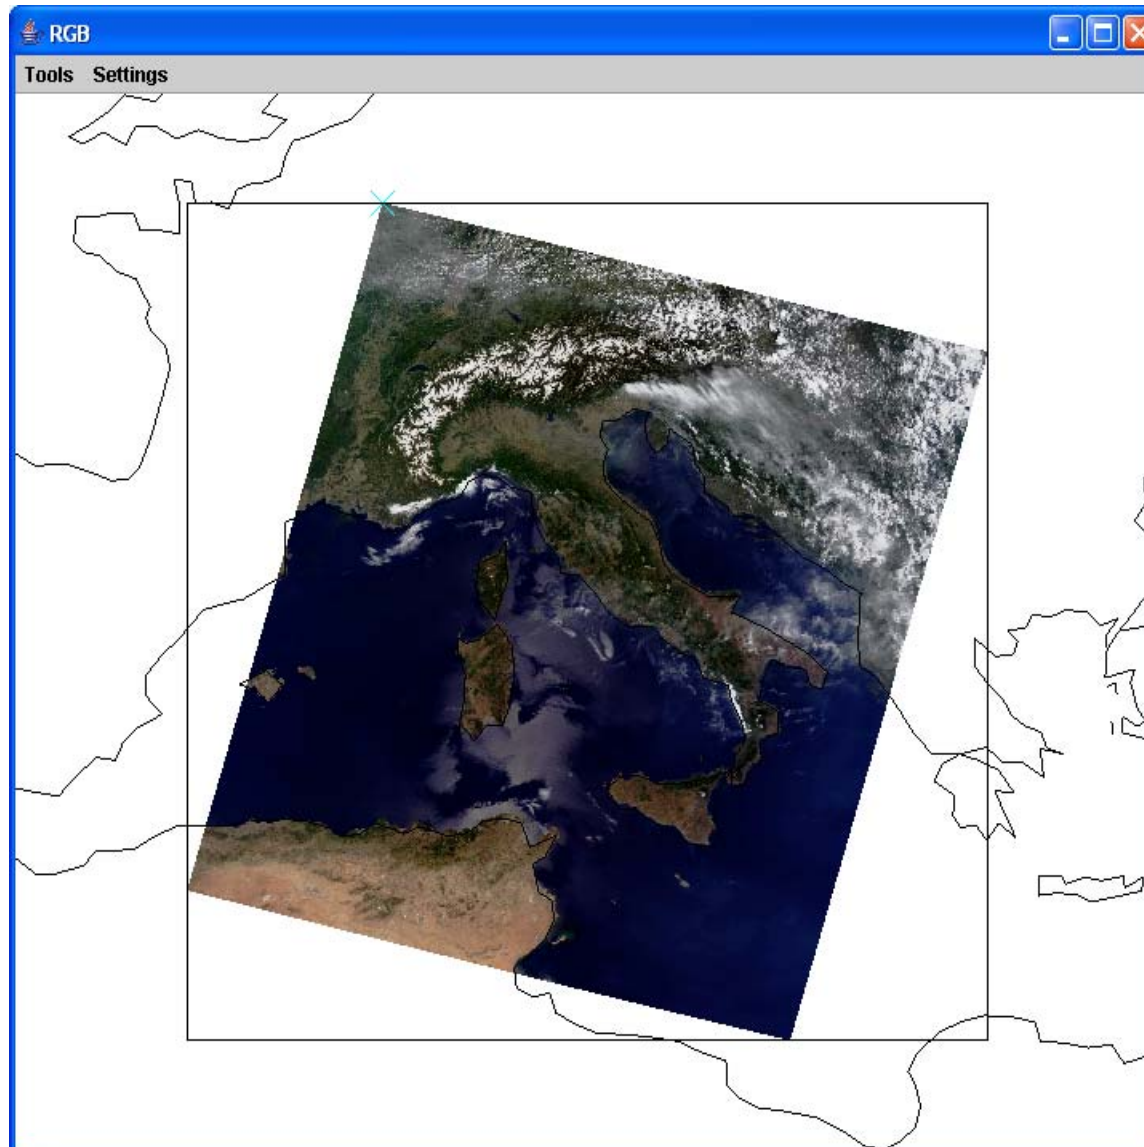

Capture Display allows you to save the image as a jpeg

Statistics displays the min and max values in the image

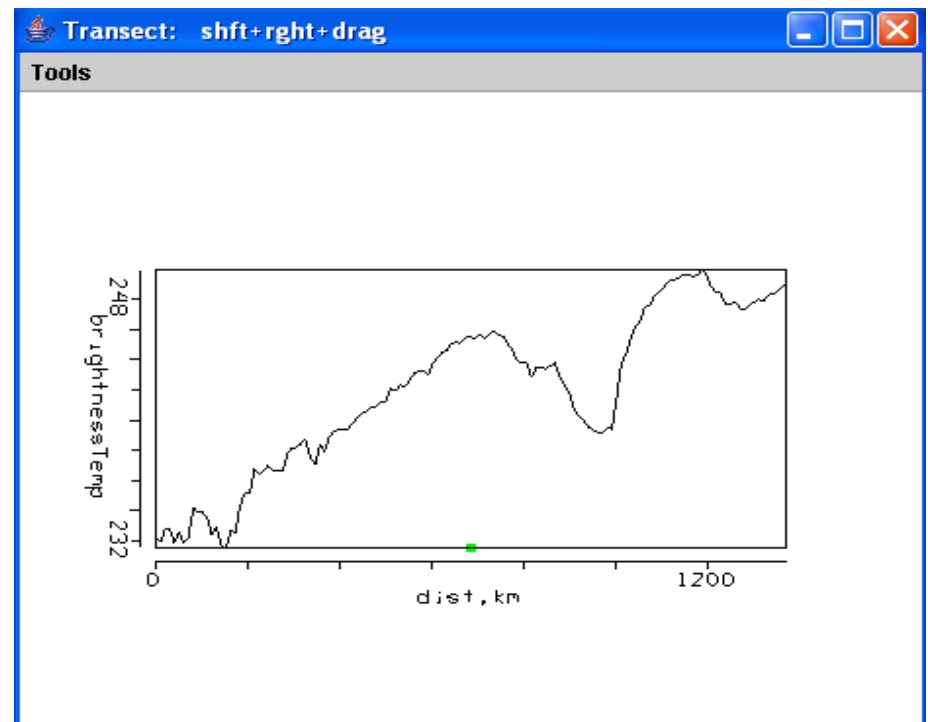

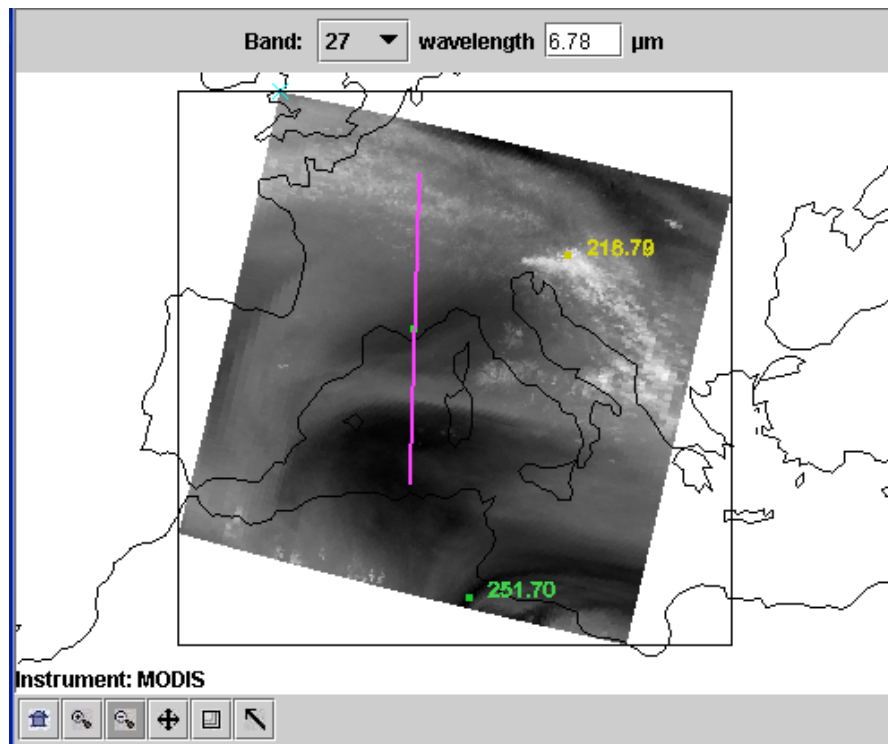

Reference Spectrum allows you to compare spectral measurements from two selected pixels (controlled by the arrows in the bottom toolbar)

Pseudo RGB Composite Image

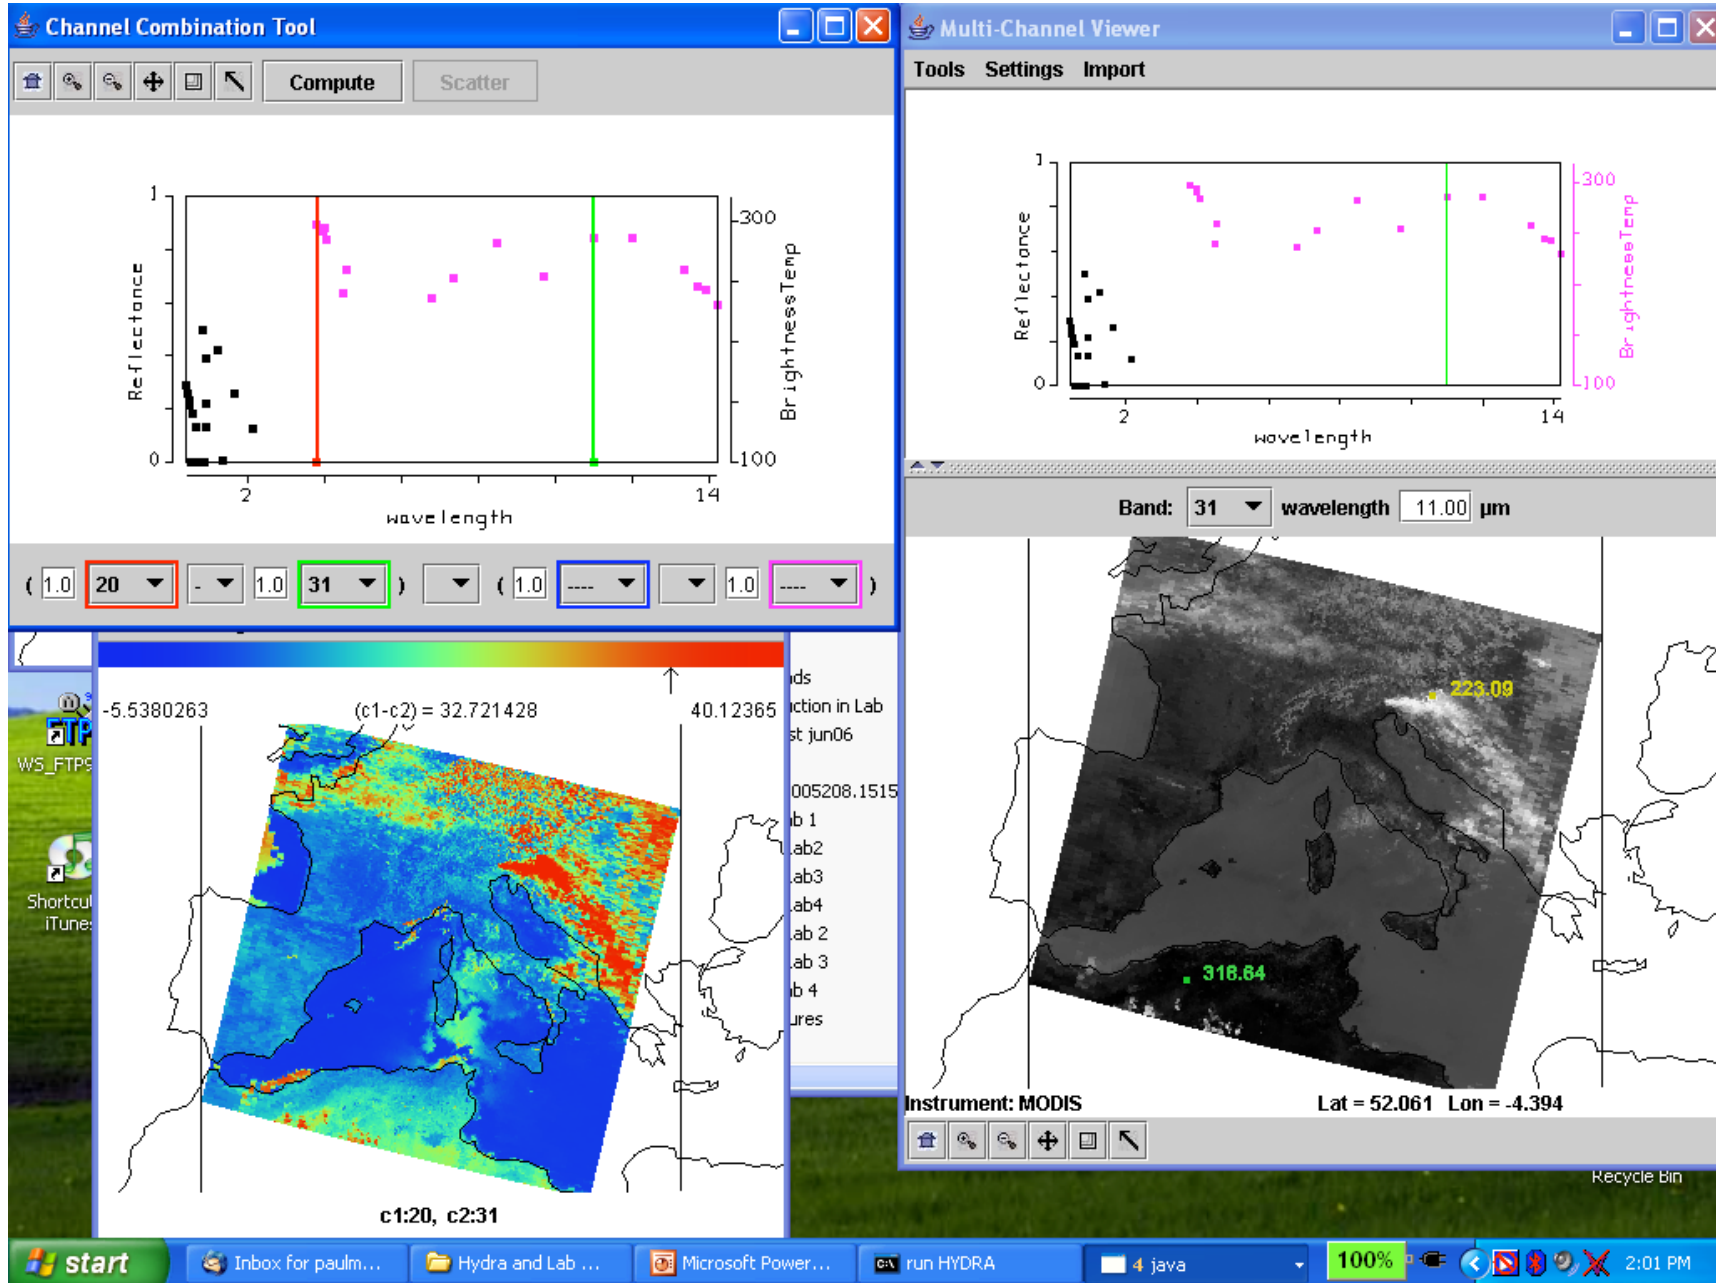

**Red – ch 1

clear = green
probably clear (95%
certain) = turquoise
uncertain = red
cloudy = white

Interrogating MODIS & AIRS data using HYDRA

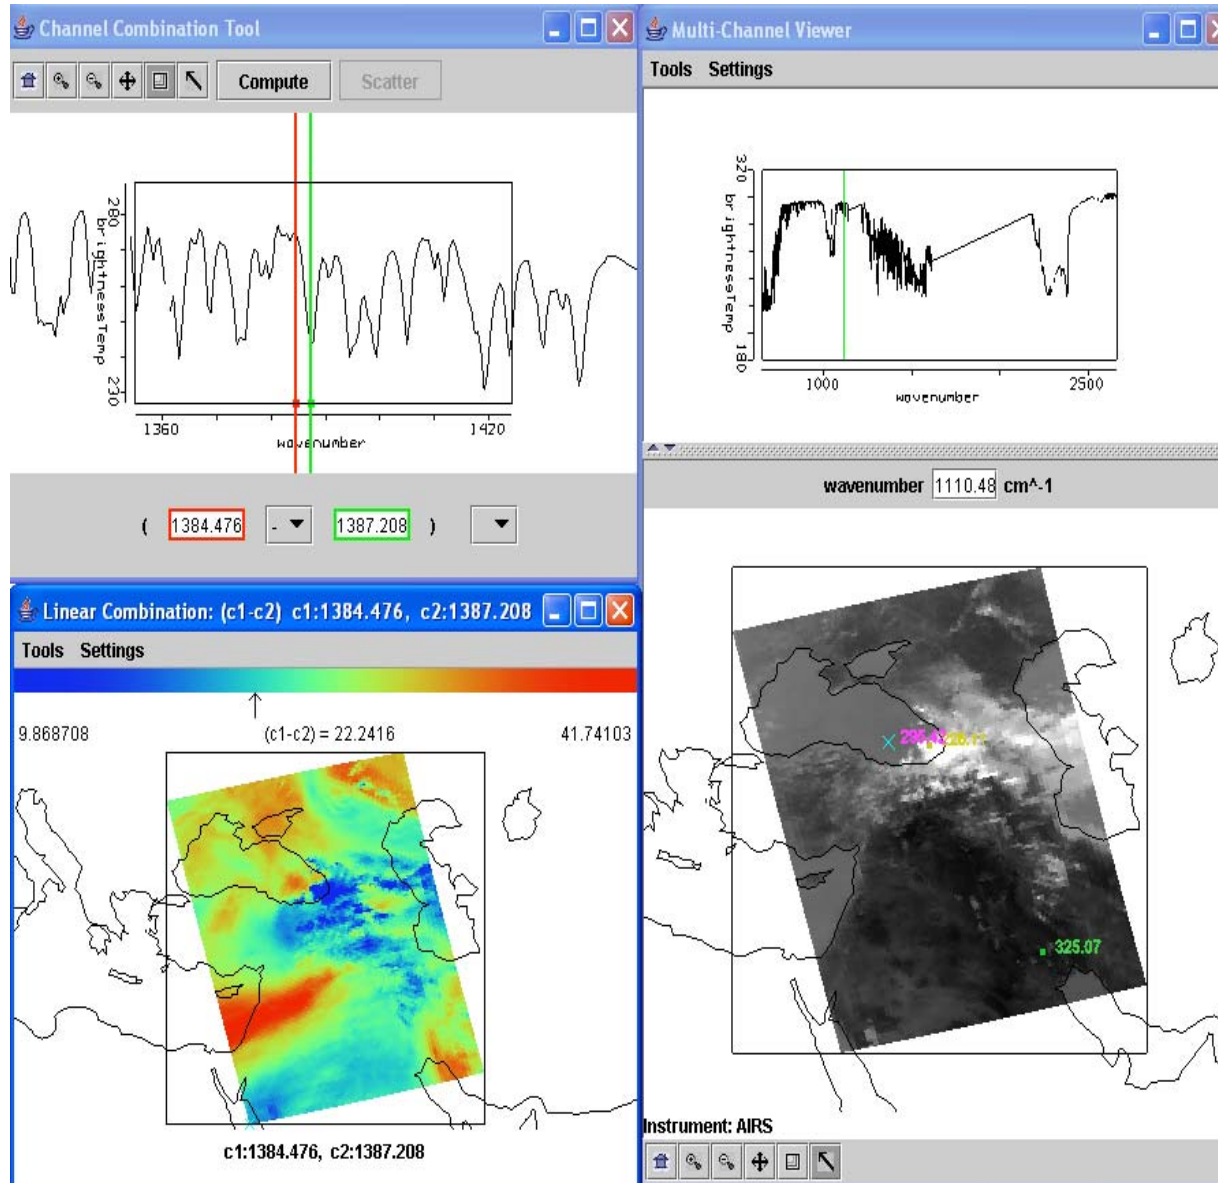

Paul Menzel
NOAA Satellite and Information Services

What is HYDRA?
What can it do?
Some examples with AIRS
How to get it?

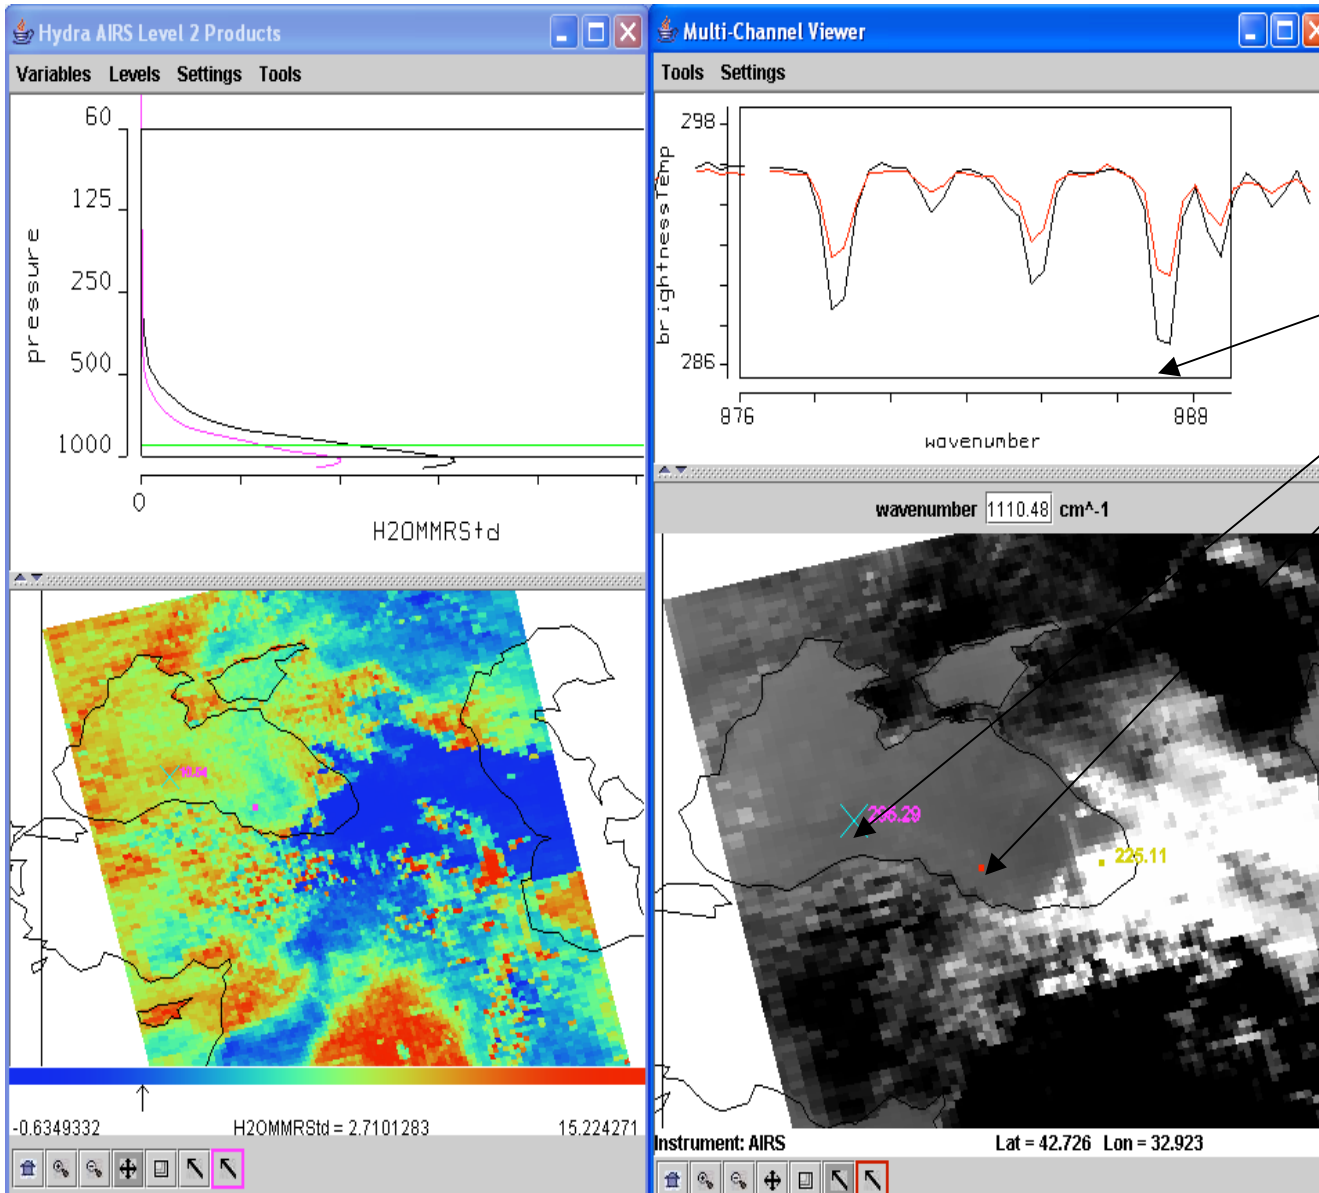

AIRS data
over
Black & Caspian Seas
28 August 2005

BT1384.5 minus BT1387.2

BT differences of more than 40 K are seen in clear regions and less than 1 K in opaque high cloudy regions

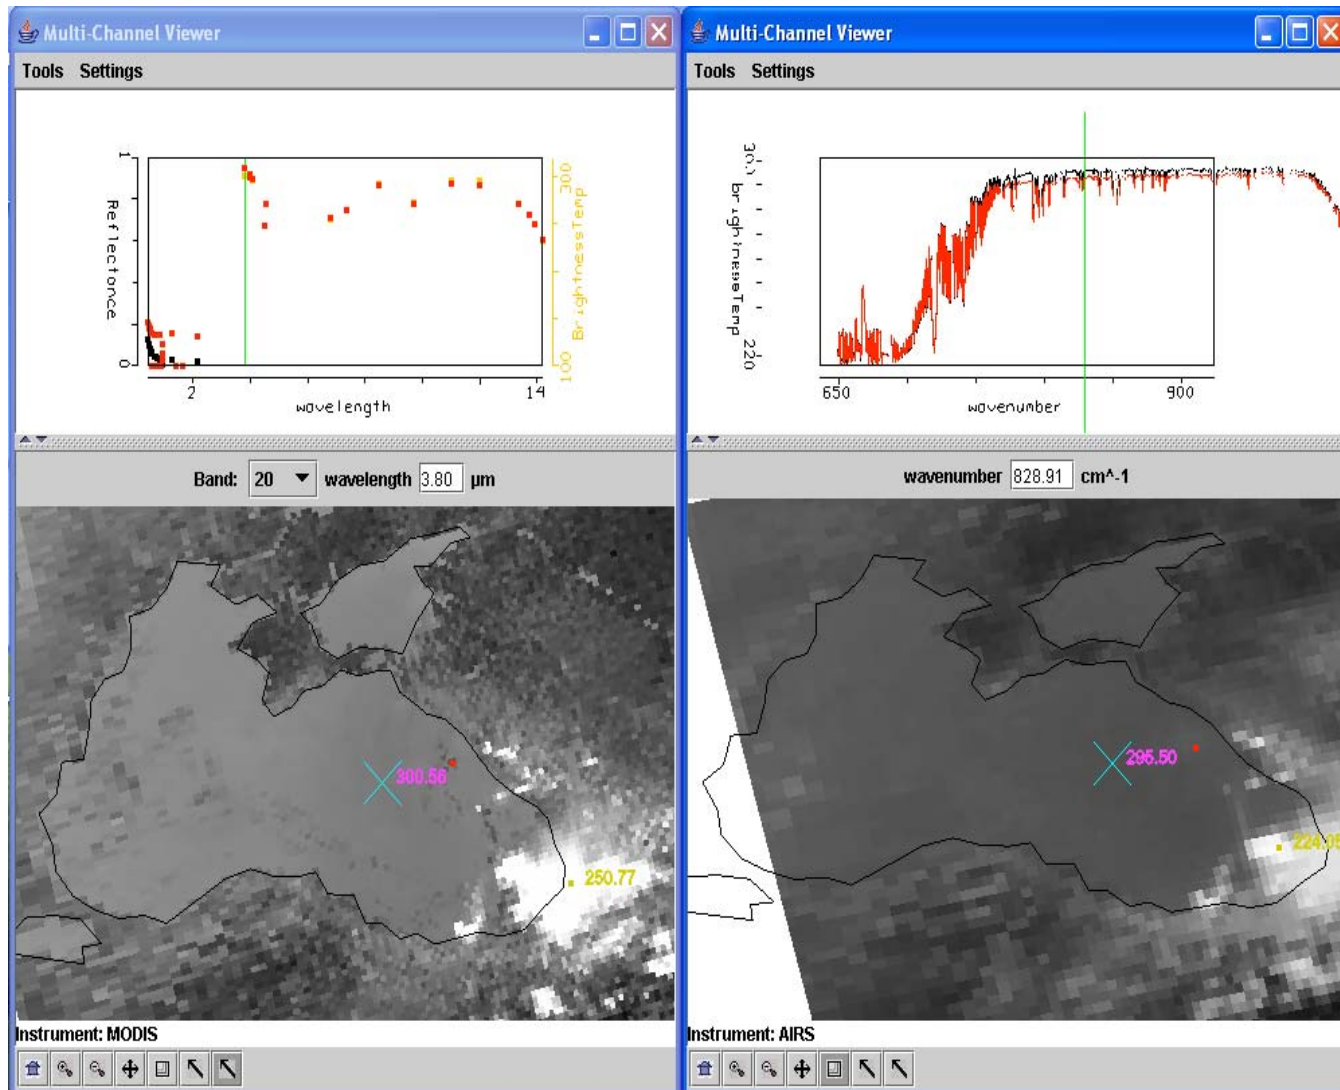

Investigating AIRS Retrievals

On-line off-line BT difference is greater in western (blue x) than eastern (red dot) location of Black Sea; x has more low level moisture than dot.

This is confirmed by moisture profiles (upper left); 900 hPa retrieved moisture image (lower left) shows moisture gradients

AIRS (right) and MODIS (left) co-located display of spectra

If you would like to send comments and be notified of updates, please join the HYDRA email list, by sending a note to: hydra-subscribe@ssec.wisc.edu. You will receive a confirmation email that you will also need to respond to in order to verify your email address.

Updated 3 March 2005

Downloading and Installing HYDRA

For Windows Users

Important note: before installing this version, be sure to **uninstall the previous one!** using: Start->Control Panel->Add/Remove Programs.

Download the installer file from [this location](#) to a temporary directory. When the transfer is complete, just *run* this file and follow the instructions. We recommend just using the default options presented.

For Linux Users

Download the tar-gz file from [this location](#). When the transfer is complete, then 'cd' to the parent directory and unpack the archive. This will **create** its own *hydra* subdirectory as a child.

For Mac OS-X Users

Download the tar-gz file from [this location](#). When the transfer is complete, then 'cd' to the parent directory and unpack the archive. This will **create** its own *hydra* subdirectory as a child. You must have Java and Java3D installed in order to use HYDRA.

Running the HYDRA application

To startup the Hydra application, either click on the menu item (Windows) or type the command *runhydra.bat*. On Linux, you will likely just type in the command *runhydra*. Please see the on-line tutorial for more details.
