

Status of VIIRS on NPP/NPOESS

*N. Christina Hsu
and the NPP/NPOESS team*

NASA Goddard Space Flight Center

Greenbelt, Maryland USA

Mission Success

The NPP Mission Success is determined by its capabilities

- *to provide continuation of a group of earth system observations initiated by the Earth Observing System (EOS) Terra, Aqua and Aura missions and*
 - *by its ability to reduce the risks associated with its advance observational capabilities as they are being transitioned from the NASA research program into the NPOESS operational program in support of both the Department of Defense (DoD) and NOAA*
- ✓ These include pre-operational risk reduction demonstration and validation for selected NPOESS instruments, and algorithms, as well as ground data processing, archive and distribution.

N. Christina Hsu
NPP Deputy Project Scientist

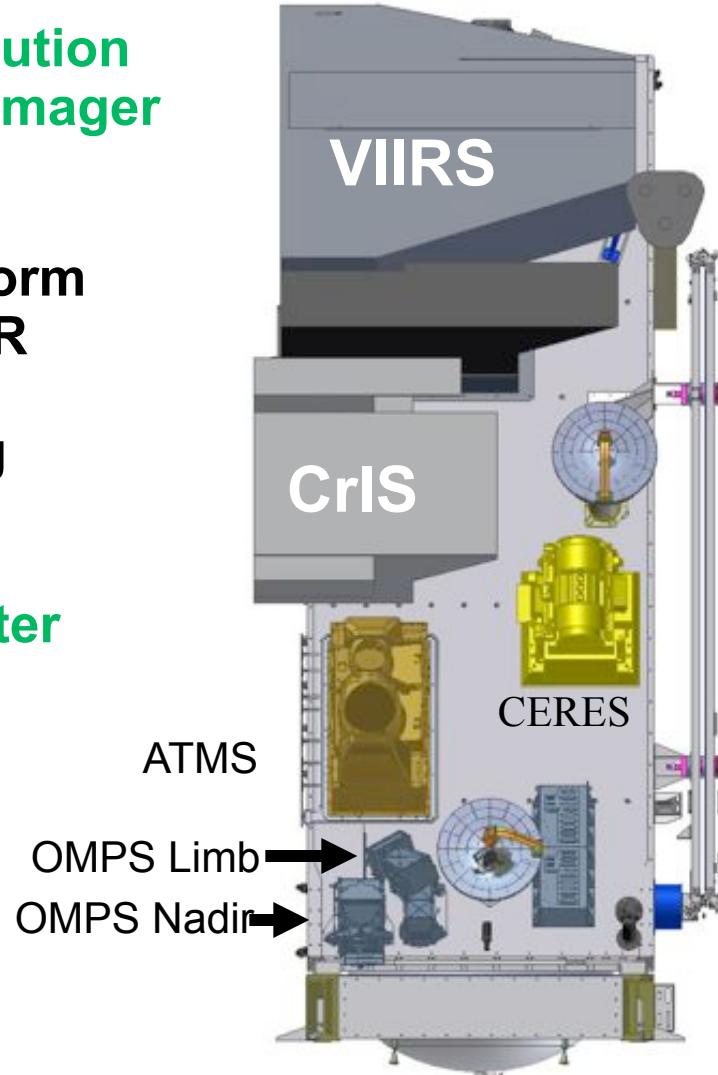

What instruments are on NPP?

VIIRS – Medium resolution
Visible& Infra-red Imager

CrlS – Fourier Transform
Spectrometer for IR
Temperature and
Moisture sounding

ATMS – Microwave
sounding radiometer

OMPS – Total Ozone
Mapping and
Ozone Profile
measurements

CERES – Earth
Radiation
Budget
measurements

- All VIIIRS bands meet SNR requirements (overall, VIIIRS SNR is better than MODIS)

- All VIIIRS bands meet dynamic Range except:

 - M1 High Gain transition to Low Gain before Lmax

 - M8 saturation observed before Lmax

 - I2-I3 Dynamic range met specification without enough margin

* Performance not yet available. These are specification values.

Values in orange: Dual gain bands M1-M5 and M7 are expected to transition to Low gain at Lsat

- All VIIIRS bands meet NeΔT requirements
- All VIIIRS Emissive bands meet dynamic range except:
 - I4 and M12 saturate slightly lower than Lmax
 - M13L will be measured at Hot Performance plateau, right after Nominal plateau.

Dominant VISNIR Xtalk

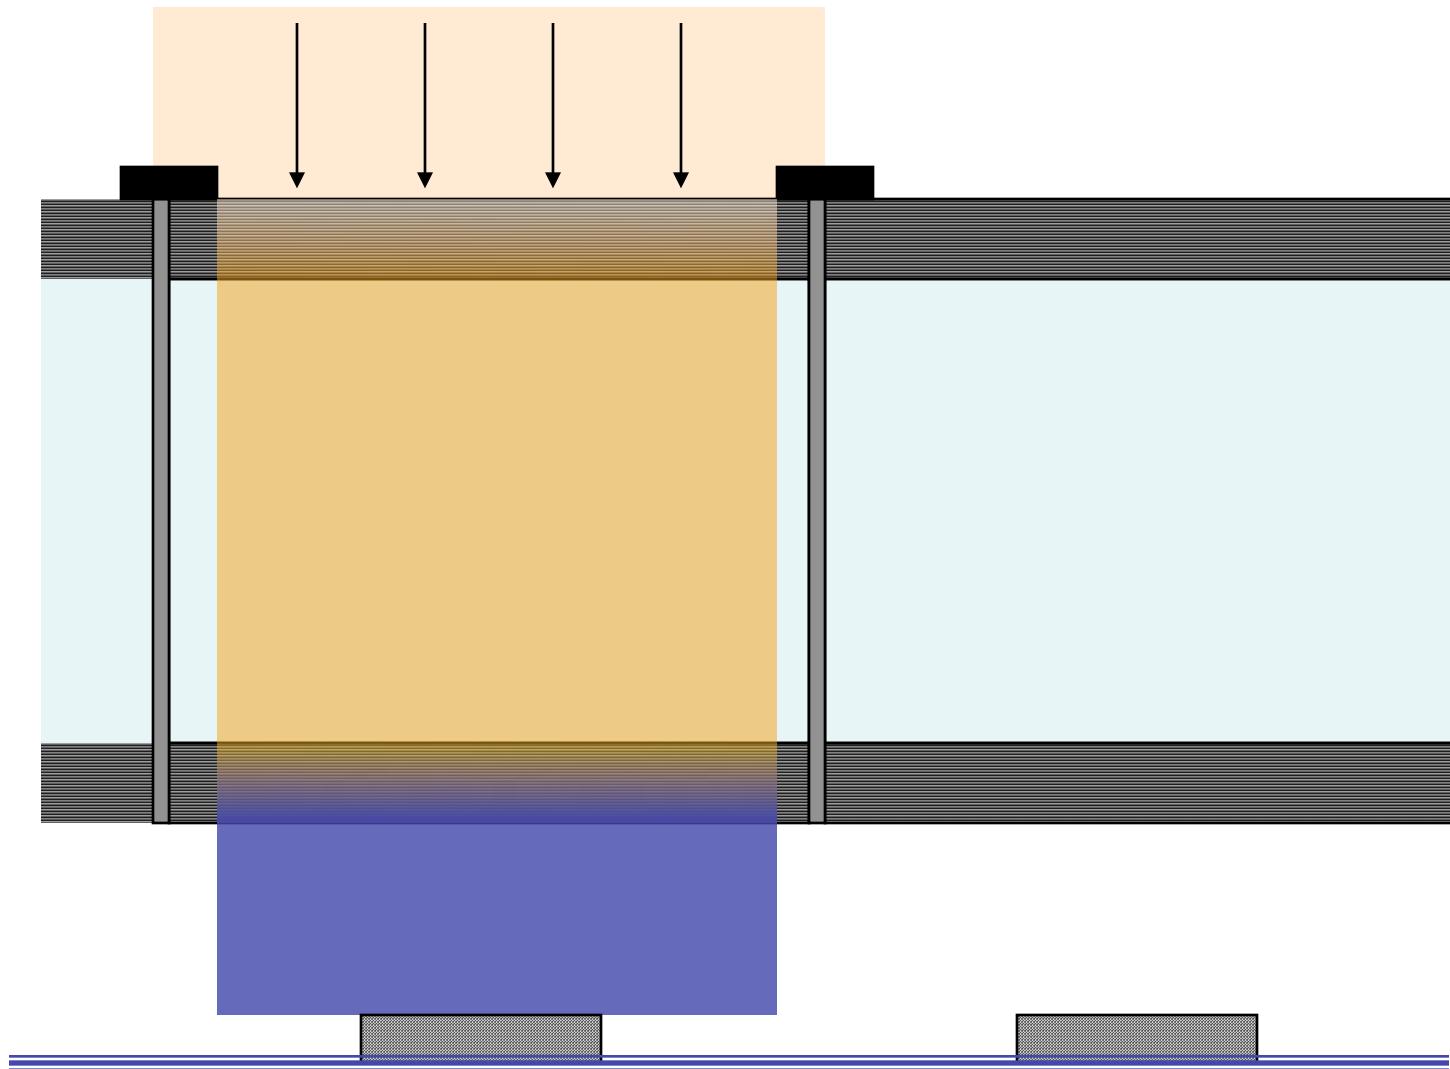

- **Optical:** linear with signal, spectral and spatial component. Believed to be largely due to filter defects.
- Magnitude primarily depends on number of defects in spectral filters ('spits'). Defects cause large angle scattering

Preliminary Results of VIIRS Xtalk effects on Aerosol EDR Performance

- *The final xtalk influence coefficients from NICST are still in progress.*
- *However, based upon the preliminary assessments of xtalk impact on SDR (i.e., reflectance), there is a good probability to continue the MODIS aerosol data records.*

*N. Christina Hsu
NPP Deputy Project Scientist*

14

*January 27, 2010
NASA/GSFC*

Summary

- The primary objective of the NPP mission is to provide continuation of the EOS data records.
- According to the preliminary results of VIIRS TV testing, aerosol products have higher probability to achieve the mission goal.
- The current targeted launch date for NPP is September 2011. These NPP/NPOESS products could be complementary to the ACE mission, in terms of providing global daily coverage of aerosol and cloud data sets.

N. Christina Hsu
NPP Deputy Project Scientist
