# TIR Remote Sensing of Volcanic Plumes

Detect plumes through transmission  $[\tau(\lambda)]$ :  
the attenuation of surface radiance  $[\epsilon(\lambda) \cdot B(\lambda, T_o)]$   
passing through the plume enroute to the sensor

$$L(\lambda, T_o) = \{\epsilon(\lambda) B(\lambda, T_o) + [1 - \epsilon(\lambda)] D(\lambda)\} \tau(\lambda) + U(\lambda)$$

The observed radiance  $[L(\lambda, T_o)]$ ; outlined arrow] includes  
the surface radiance (red arrow), reflected downwelling  
sky radiance  $[D(\lambda)]$ , yellow arrow], and upwelling path  
radiance  $[U(\lambda)]$ , blue arrow]

Reconstruct Observed Radiance:

- 1) Transmission, sky radiance, and path radiance are estimated through radiative transfer (RT) modeling, cached, and re-used
- 2) Surface emissivity  $[\epsilon(\lambda)]$  available from lab spectra, product archives, or calculated within scene
- 3) Surface temperature  $[T_o]$  estimated from radiance observations

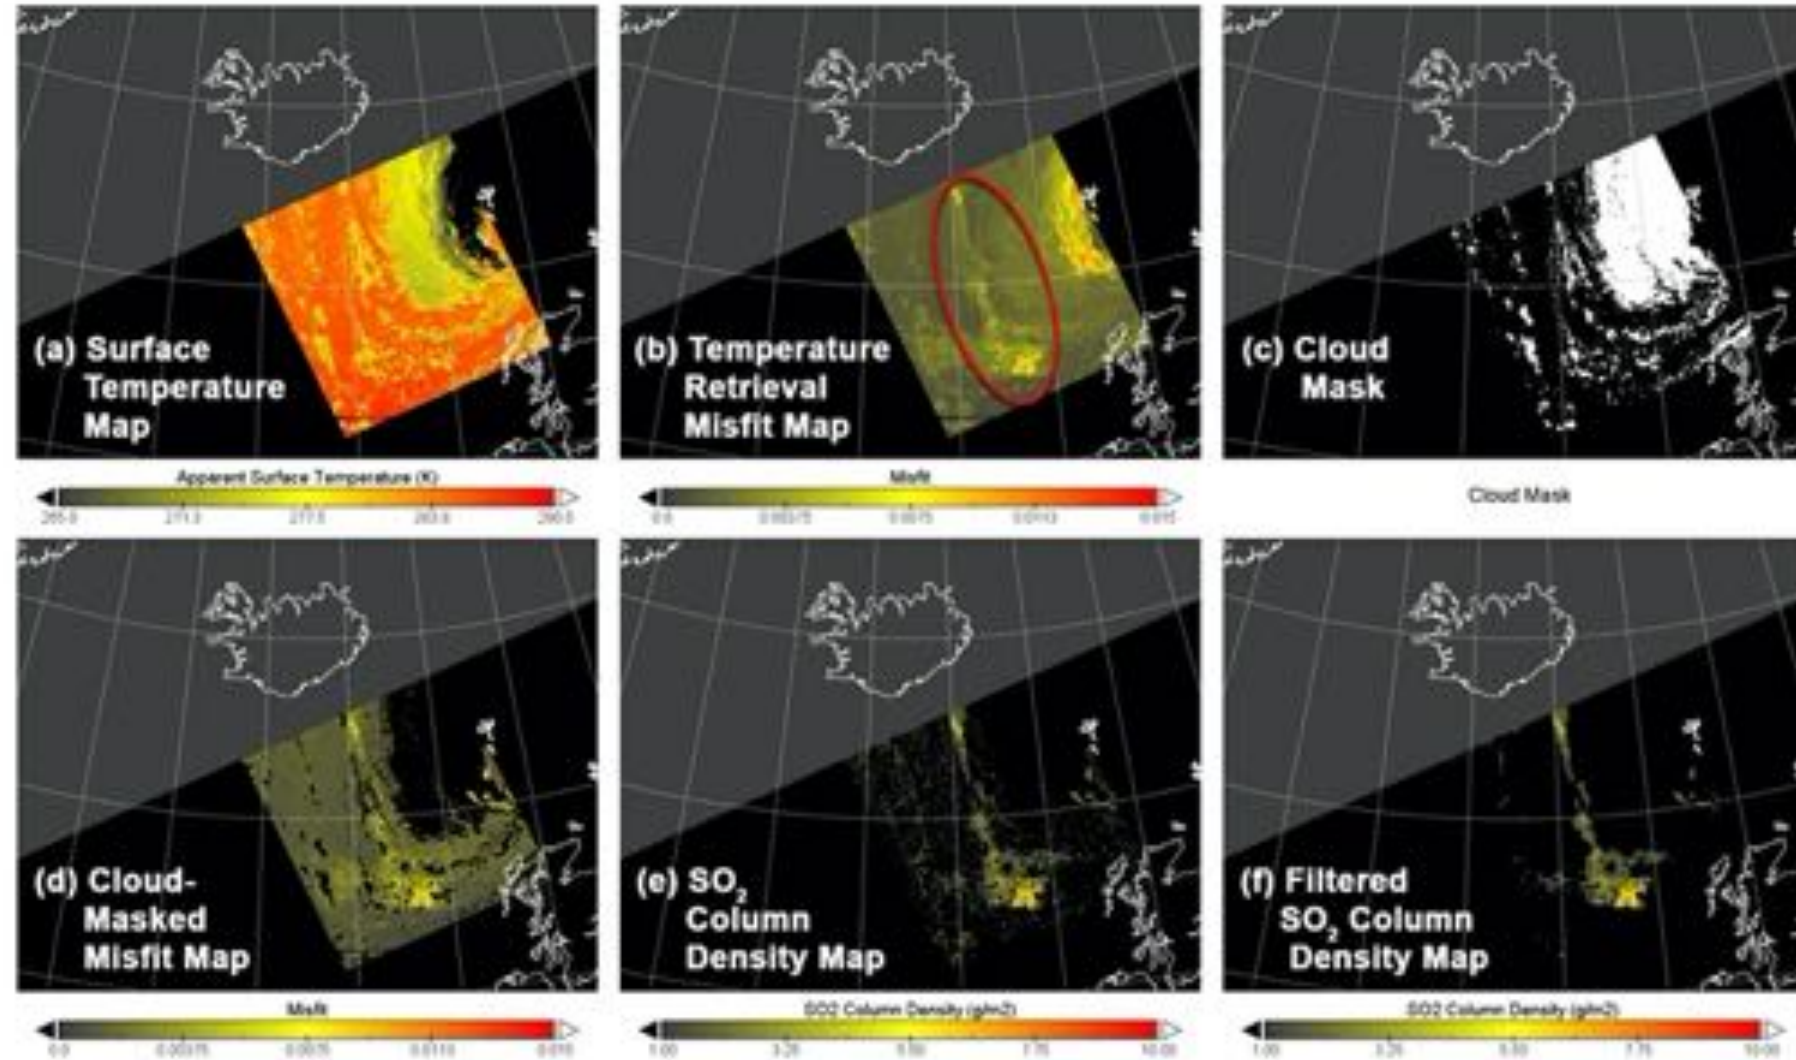

# RT-Based Plume Detection and Mapping: Bardarbunga Volcano (Iceland) 2014-09-05

Jet Propulsion Laboratory  
California Institute of Technology

- Surface temperature estimation does not consider volcanic plumes or met. clouds
- Misfit map shows the locations of plumes (red oval) and met clouds
- Met clouds are identified by comparing surface temperature estimates with air temperature at surface
- Combination of cloud mask and misfit map improves the detection of volcanic plumes
- Estimation of  $\text{SO}_2$  column density is confined to the locations identified by the masked misfit map
- $\text{SO}_2$  map is filtered/repared to minimize the “holes” corresponding to the locations of met clouds.

# Calibration/Validation: Bardarbunga Example

Jet Propulsion Laboratory  
California Institute of Technology

(a) VNPP  
03:15 UTC

(b) MODIS  
03:25 UTC

**2014-09-05**  
**03:15/03:25 UTC**  
**(Night-time)**

SO<sub>2</sub> retrievals based on (a) VNPP and (b) MODIS-Aqua observations are virtually identical

Validates the use of VNPP data to augment and extend MODIS-based data records

(a) SNPP-OMPS  
Total Mass:  
149.5 kt

(b) VIIRS-VMAE  
Total Mass:  
150 kt

**2014-09-05**  
**13:06 UTC**  
**(Daytime)**

OMPS (UV) and VIIRS (TIR) Collocated on S-NPP and NOAA-20 Platforms

Contemporaneous Retrievals of Total SO<sub>2</sub> Mass from S-NPP are in Excellent Agreement (149.5 vs. 150 kt)

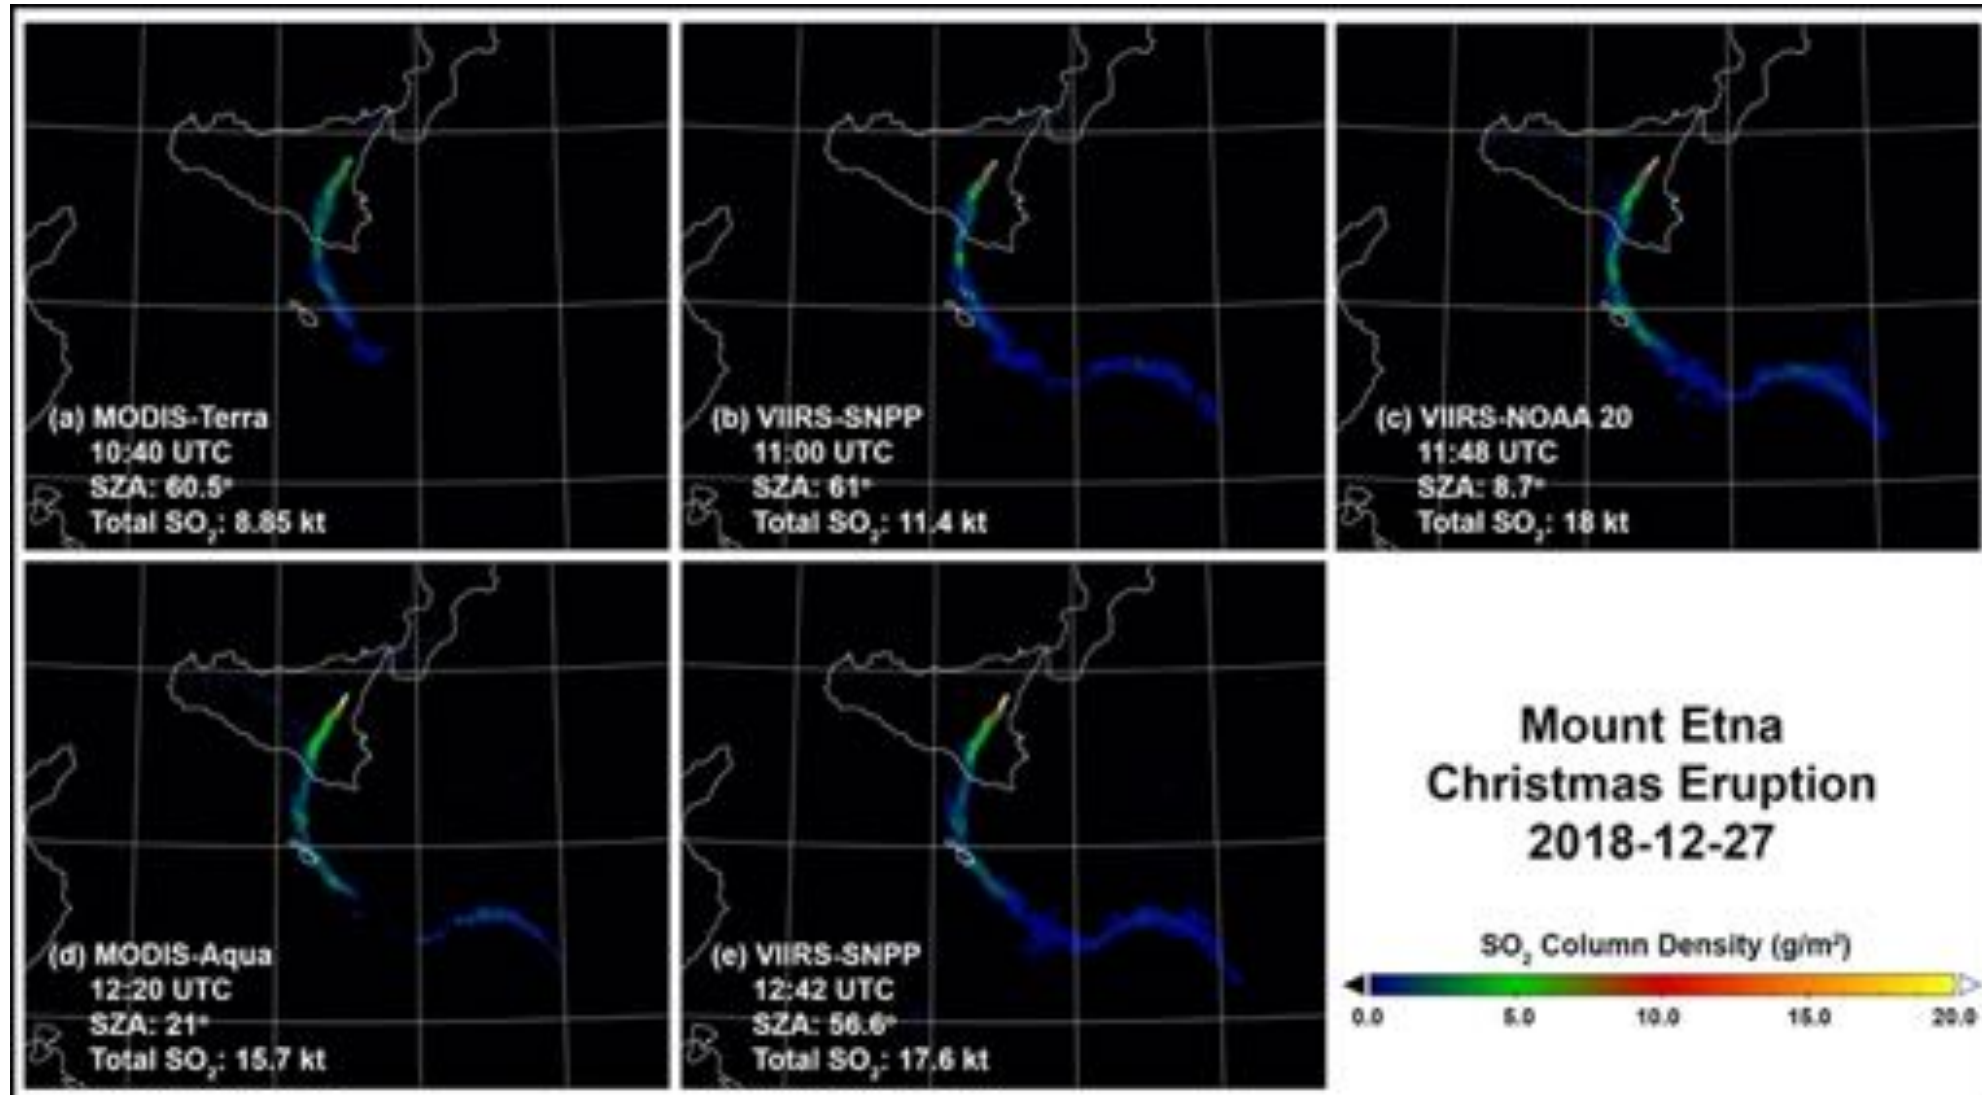

# Calibration/Validation: Mt. Etna Example

Jet Propulsion Laboratory  
California Institute of Technology

Five Daytime  
Observations Within  
Period of ~120 min  
(average of 36 min  
between observations)

Validate data products  
through comparison  
with field measure-  
ments and compli-  
mentary satellite data  
products (including  
SEVIRI, IASI, and  
TROPOMI) provided  
by Italian National  
Institute of Geophysics  
and Volcanology  
(INGV)

## **Problem:**

**Plume Detection Requires RT-Based Temperature Estimation**

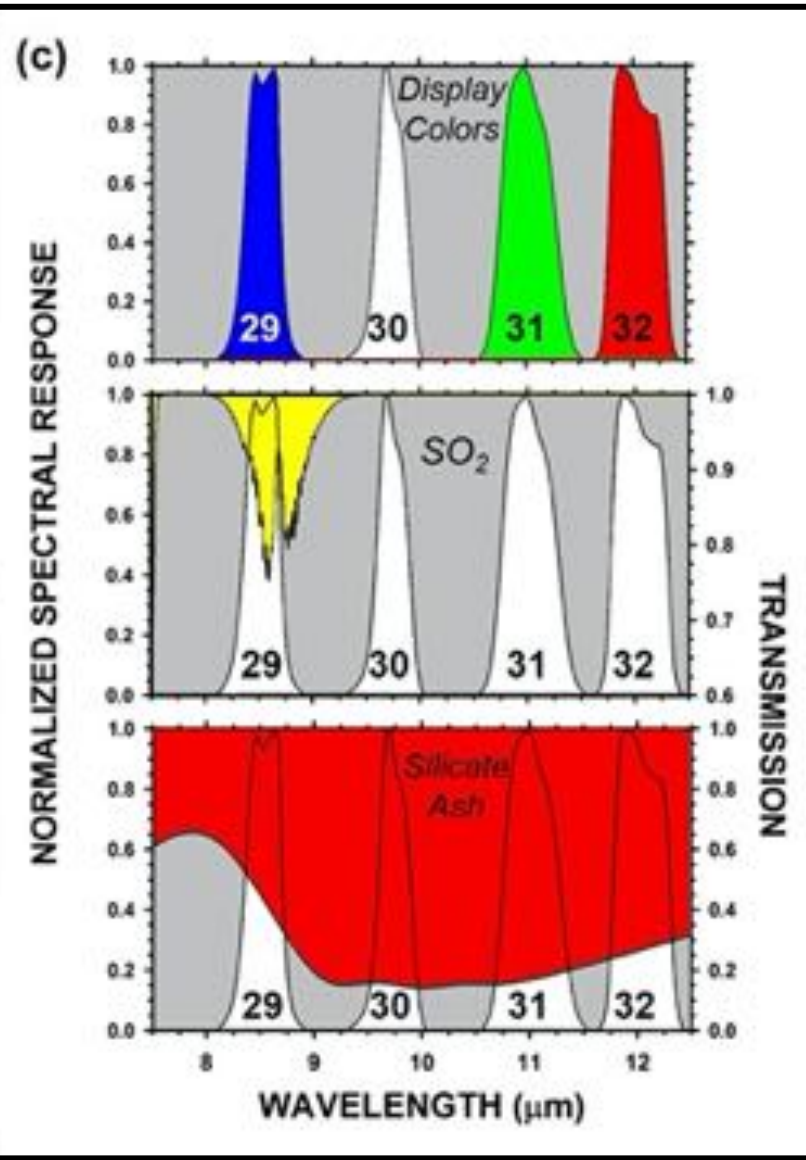

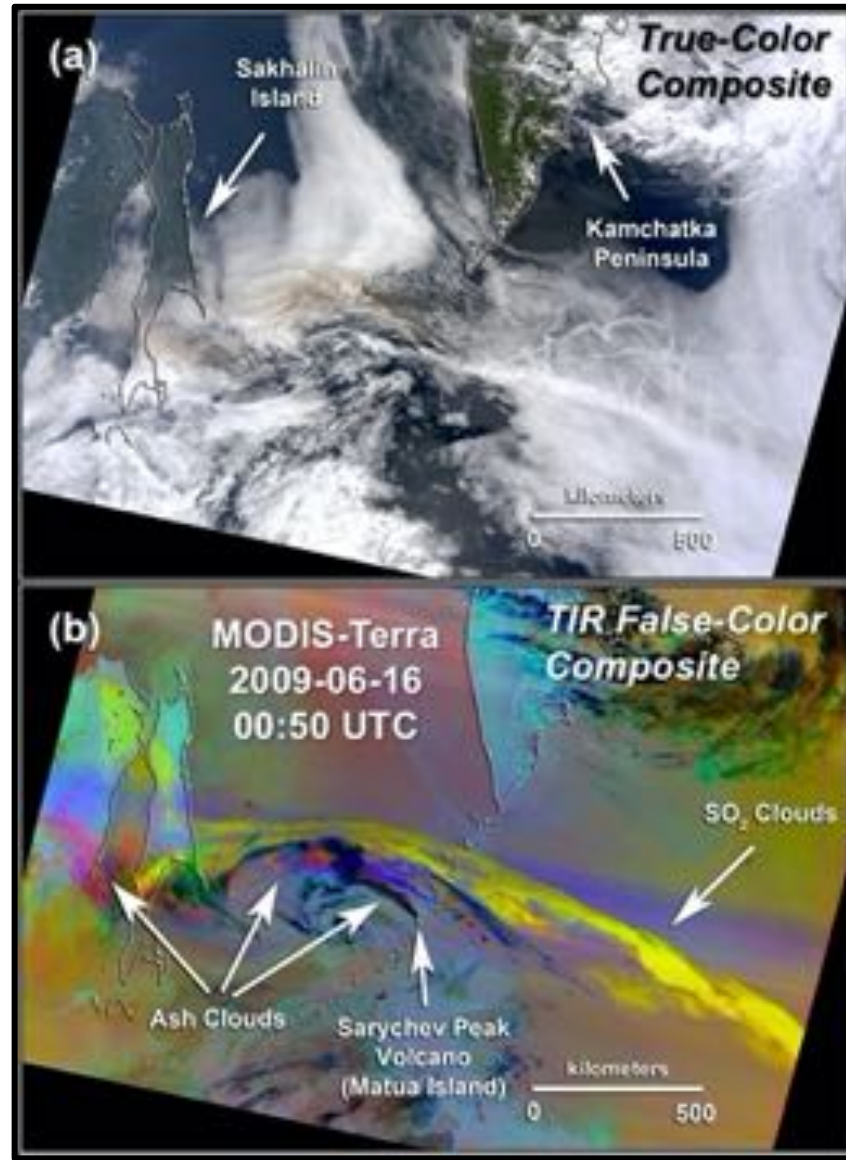

## **Solution:**

**“Rapid” Plume Detection Based on Spectral Properties and  
Brightness Temperature**

**Confine RT-Based Temperature and SO<sub>2</sub> Estimates to Plumes**

# Plume Spectroscopy: Sarychev Peak Volcano

- a) MODIS-Terra True-color composite. Volcanic plumes and meteorological clouds have similar appearance at visible wavelengths
- b) False-color composite of TIR data from Channels 32, 31, and 29, displayed in red, green, and blue. SO<sub>2</sub> plumes appear yellow, while the display colors of ash plumes range between red and magenta
- c) Transmission spectra of SO<sub>2</sub> (middle) and silicate ash (bottom), superimposed on the spectral response of MODIS Channels 29, 30, 31, and 32

# RGB Plume Detection Strategy: De-Correlation Stretch (D-Stretch)

Jet Propulsion Laboratory  
California Institute of Technology

**D-Stretch based on PCA – Results Depend on Scene Statistics Used to Calculate PC**

(a) True-Color Composite; (b) TIR D-Stretch based on Global Scene Statistics

(c) D-Stretch based on Statistics for User-Defined Sub-scene

(d) D-Stretch Minima based on Quadrant Statistics

# VIIRS RGB Plume Products: Raikoki Volcano | 2019-06-22 | 1430 UTC

Jet Propulsion Laboratory  
California Institute of Technology
